

SMART HOME

Is the term "Smart Home" only relative to the wealthy? Often Automated Smart Homes are found in luxury residential projects.

Smart Homes have become more and more popular recently. Not just for the wealthy either.

Although becoming more and more popular, home automation isn't a term most are concerned with.

Smart or intelligent people not only pay attention to its luxury but also to its function and benefits.

Equipping your home with Smart-Bus technology can enhance your level of lifestyle. In addition to that, as the cost of resources continue to rise and the price of electronics continue to fall, home automation proves to be more and more cost effective.

With all these descriptions of a smart home, what benefits can it really offer us?

There is a large variety of intelligent gadgets that are available for your home. A DDP (Dynamic Display Panel), is used to replace your old light switches and remote controls. You can even run your television or security system from it.

Installing Smart-Bus Generation4 (G4) equipment also saves great costs in wiring and labor.

The constant monitoring and control of your Smart Home also saves electricity through the use of 9 in 1 sensors to detect motion and occupancy.

A smart home controls all the functions in and outside the house from a single point of management. Through the use of innovative technology, home owners are able to turn their homes into state of the art machines that can be manipulated and monitored from any part of the world.

Smart Homes are not only a statement of style and luxury..

Smart Homes are a way of smart living
