Common Questions & Answers

clear your doubts

What is the difference between an Automated and a Normal Home?

Automated Homes are Simpler and More elegant. Yet, provide more flexibility in functionality. An example: A single smart wall panel switch replaces many normal switches and equipment like: dimmers, thermostats, volume controllers, water boilers, lights and fan speed..etc.

In a smart Home a simple touch on your smart Phone, sending SMS, or a pressing a single button can automatically activate or deactivate any or all of the

following in a scene macro command:

Dim Lights to certain level in different Area, start the Air Conditioning, Open or close the shades, start Music in the Hallways, start TV and DVD or the Set Top Box in the Living Room, Heat up the coffee Machine, Start Water Boilers, Activate and switch the Security Alarm to Night Mode and so on...

The Other Difference is the ability of the SmartHome to conserve energy by decreasing wastage, securing the home, and maintaining air quality which makes it a better investment with monthly returns and a real value for the money.

Is G4 Automation Expensive to Implement?

Smart-BUS G4 Automation is exceptionally Affordable and therefore the Bigger the Project and the more standard Systems needed (like: Lighting, Air conditioning, Security alarm, PA/BGM, Door Access,++) the Cheaper the Smart G4 system shall become. (Comparative Studies show 25% Faster Wiring and Implementation time when compared to normal systems with 41% savings in Materials wasted on normal systems) The G4 Team Guarantees relatively, the same Budget allocation or even Lower to execute all systems planned inclusively. The Smart-G4 Estimated total Implementation Cost is usually between 1.5%-4% of property value which is usually allocated in general cases (Normal commercial systems and wiring budget)

What is Smart-BUS G4?

Smart-BUS G4 Automation is the fourth generation of S-BUS Automation entertainment and control System solutions. This system is unique as it allows installers to wire flexibly, Install and program by hand easily. Smart-G4 is also Unique for Users, because of its simplicity and user friendly interface, Luxury finishes, and affordability.

What Benefits can Smart-G4 Give me as an Owner?

S-BUS G4 Automation System can Give many Benefits to different Types of Owners accordingly:

- For Home Owners G4 can provide: Luxury, Comfort, Security, vanity, & Energy Savings,
- For Property Developers G4 provides: Value adding, Faster Property turnover, Green & Smart Image
- For Bankers G4 can Provide: Better Collateral, higher Loan premiums, Green Loan Image
- For Hotel Owners G4 provides: more comfort, Luxury & Techno Image, Better Room occupancy & higher rates

Is Smart-BUS Protocol an Open One?

Yes, Smart-BUS G4 protocol is truly an Open protocol. It is particularly designed to become the standard for solving All Automation Needs. Smart-Group has registered this Protocol Patent to assume ownership and make sure that it remains open to all System Developers and Integrators worldwide.

Does Smart-G4 Automation System Save Energy?

Yes, Smart-BUS Automation can save between 30% - 80% of wasted energy if a comprehensive System is designed and implemented accurately. This saving in wastage also enhances the effective usage time and decreases replacement and repair costs.

Common Questions & Answer

What happen if I buy Smart-BUS G4 today (then in few years once a new System is launched) will I be able to use the new system or upgrade or I will lose all of my investment?

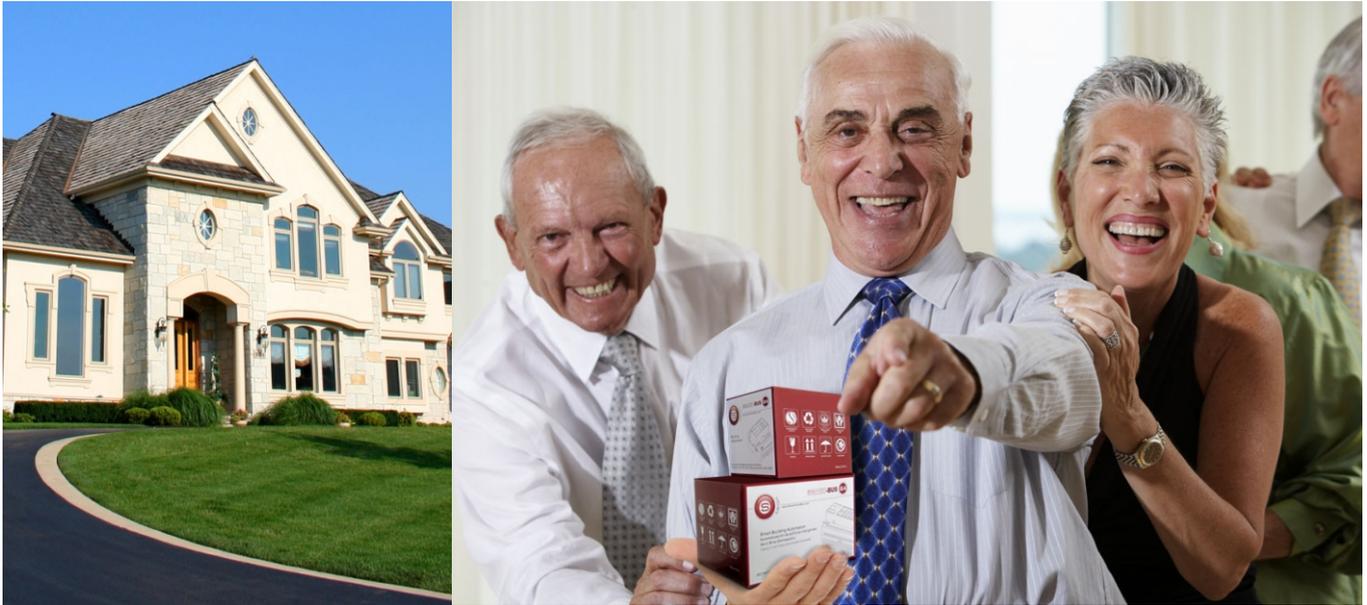

Smart-Group is on a constant Research and Development path, but has one constant principle for innovation based on system compatibility and easy upgradability. Today, the Smart-BUS G4 is compatible with the older Generations G3, G2 and Most of the G1 products launched earlier. Similarly, we expect the future generations to have the same basic ability.

Are you planning to produce retrofit products soon?

Smart-Groups Vast experience in implementing and testing different Technologies has made us realize that to date, only wired technology can maintain quality, communication speed, stability of functions and ability to handle big loads for professional fault free implementation. Smart-Group understands that only the small industry sector might accept Retrofit or Semi-Retrofit Solutions.

For this reason, Smart-Group is currently taking solid progressive steps to integrate and partner with other retrofit technology Giants to enable integrating Smart-BUS to other Retro systems like: C4/Zigbee, UPB/PCS, W-BUS, TrailClick and Other options.

SMART-HOME's reliable home control systems are the most popular in the world.

Green & Smart Building

Many People Are confused and do not distinguish the difference and the commonalities between Green and Smart Building. Here we will briefly Identify both and establish the common areas.

A) Green Building:

Green Building is the Building that uses environmental friendly materials, Equipment, and methods. In Green Building Energy Sustainability is always put before Eye and thus many factors that defy such energy sustainability must be tackled by the Green building Designed like:

- Infiltration (Leakage of Energy due to Unsealed Volumes or Hatches
- Penetration (Extreme sunlight entering Building in Hot Arid Regions)
- Daylight Harvesting (Minimizing Corridors, and Introducing Light tunnels ++)
- Investment in Insulation Materials and Technology
- Investment in Energy smart (Cooling, heating, and Lighting Systems and technologies ++)
- Decreasing the wastage in Energy.
- Recycling - reusing

B) Smart Building

Smart Building is the comfortable Building that is well Monitored and controlled.

- Lighting Inside and outside
- Elevators and Escalators
- Boilers and Pumps
- Exits and entrances
- Temperature and Climate
- PA and BGM
- Media and Information
- Security and Safety
- Energy Management and Wastage
- Shades and Motorized Louvers

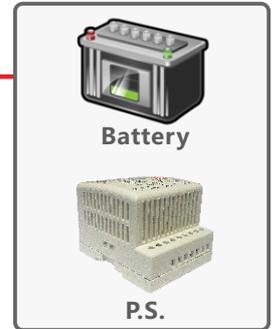

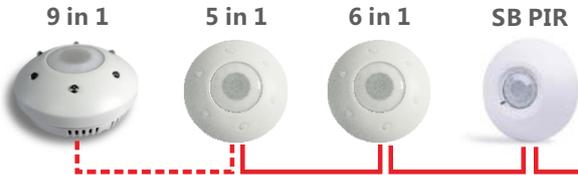

C) Commonalities between Green and Smart Buildings:

Only Few things are in common between the 2 Conceptual building types

- 1- Decreasing the wastage in energy using Timers, Logics, Occupancy Sensors ++
- 2- Daylight Harvesting by Motorizing Louvers and Shades ++
- 3- Using Smart Building Energy Management and Monitoring ability to Monitor and enforce better practice and behavior
- 4- Decrease in usage of Environmentally harming materials like Conduits, cables, back boxes, many wall devices.. Etc. (As well as Decreasing Noise Pollution time during its Installation)
- 5- Warnings about User created Infiltration (forgotten Doors, windows, Hatches ++ open)
- 6- Dimming Lights create at least 30% savings in energy due to less electricity, less heat generation, and less need for Air conditioning accordingly.
- 7- Controlling wastage include switching off devices, decreasing operational speed slightly, or dimming lights slightly which all three of these make the Replacement time and costs much less.
