

## **S-BUS**

**Lighting, HVAC, Sensors  
Music, IR, RsIP and Logic++**

Programming Guide – Ver.2.0

**Eng.Sameh Ibrahim**

Last Rev:April 2012

## Contents

### 1-Introduction

- Objective 1
- S-bus products 1-2
- Course content 1-3

### 2- Start Programming

- S-Bus Programming Software overview 2-1
- Installer Programming Ethernet Port overview 2-2
- S-bus Configuration Software basic setting 2-3
- Devices address and Search 2-4
- Steps of basic programming 2-5

### 3- Relays and Dimmers Programming

- Relays and Dimmers type overview 3-1
- Setting Relay and Dimmers Address 3-2
- Channels search and Remarks 3-3
- Relay Channel Setting 3-4
- Dimmer Channel Setting 3-5
- Area Setting 3-6
- Scene Setting 3-7
- Scene Restore 3-8
- Sequence Setting 3-9

### 4- Panel Switch Programming

- Panel Switch Type Overview 4-1
- Panel Switch Address and basic setting 4-2
- Panel Switch button Remarks and Modes 4-3
- Panel Switch button Function settings 4-4
- Panel Switch button Memory, Dimming, and LED Setting 4-5
- Live Example about Lighting, Motor shade Programming 4-6
- Panel Switch Setup (Minimum Diming Value and Infrared) 4-7

### 5- HVAC2 Programming

- Introduction of HVAC Module 5-1
- HVAC Address and Testing 5-2
- HVAC Startup and Switch off Safety Delay 5-3
- HVAC Mode Configuration and safety Running Sequence 5-4
- HVAC VAV Fan Voltage Output Setting 5-5

## **6- DDP LCD Panel (Basic Lighting and HVAC Function)**

DDP Overview	6-1
DDP Address Page Password and Language Setting	6-2
DDP Basic setting	6-3
DDP 4 Pages Button Remarks and Modes	6-4
DDP Buttons Function setting	6-5
DDP Buttons Memory, Dimming, and LED Setting	6-6
DDP Setup (Minimum Diming Value and Infrared)	6-7
DDP Combination Way	6-8
DDP Button Picture Edit and Download	6-9
DDP Mutual Exclusion Function	6-10
DDP Air condition Basic Setting and testing	6-11
DDP AC Page control Setup	6-12
DDP Temp Calibration and Lock function	6-13
DDP Slave to other DDP AC setting	6-14
DDP Broadcast Function	6-15
DDP AC Graphic setting	6-16
DDP Infrared Function overview	6-17

## **7- Z-audio 2 (Music system)**

Z-audio Overview	7-1
Z-audio basic setting	7-2
Z-audio: how to make pairing with DDP ?	7-3

## **8- 9 in1 Sensor PIR Programming**

S-BUS 9 in 1 sensor Overview	8-1
9 in 1 sensor Basic setting	8-3
Learning and send IR codes	8-4

## **9- Rs 232/485 Module**

Rs 232/485 overview	9-1
Rs 232 /485 to s-bus	9-2
Rs 232/485 : S-bus to Rs232	9-3

## **10- Logic Module**

Logic Overview	10-1
Logic time and location sitting	10-2
Logic pin setup	10-3
Logic Modify output	10-4
Logic Linked table	10-5

## Before you begin this course

Before you begin this course, you should have:

- Understand the basic bus Diagram Connection Topology
- Understand the Lighting and HVAC Connections Diagram
- Basic Knowledge about IP setting.
- Basic Knowledge of using Windows operating system.
- Basic Knowledge of using Windows Painter.

## Prerequisites

Either

- Products overview course.
- Installation Course.

## How this course is organized

Lighting and HVAC Programming Guide Course Organized in Simple way of Product overview, Example Picture, (  Notices) , (  Advices) , and Program Examples to give you the Programming skills in very easy and professional way.

For Training Course Request Please apply online

[www.smarthomebus.com](http://www.smarthomebus.com)

# **1- Introduction**

Welcome to S-BUS Lighting Motor and HVAC2 Programming Guide, you are now a Beginner Programmer who will know soon how the S-bus Lighting, motor and HVAC Programming is simple.

## **1-1 Objective:**

After this course you will be able to program the Lights Dimmers and relays with the switches Panel, Program curtain shades control, program the Air condition setting and DDP panel, create and download different Pictures on the LCD, and start with Motion sensor and Automate your Project.

## **1-2 S-Bus products:**

S-BUS Products vary with its powerful and multi functions, it has the high power dimmer and relay, Curtain, DMX and LED controller, Wall switches and Dynamic Display Panel "DDP", HVAC2 Air condition control and different types of sensors, like Motion sensor, light intensity sensor, Ultrasonic sensor, Dry input sensor, Analog input, current sensor, Power meter, Infrared receivers and transmitter, Security and Automation, Audio Module, RS232, Programming and integrations Module

## **1-3 Course content:**

This course covers 12 Basic Lessons:

*In the Lesson 1* you will know about the S-bus configuration software, install it on your computer and get started with it, set your IP address and know what is the Programming port and set its address, search for the devices and start programming.

*In the Lesson 2* you will be able to program the Dimmers and Relay, test the Lighting channel and edit the channel Remarks, set the Area and program the scenes and sequence.

*In Lesson 4* you will be able to program your first panel switch, in this level you will know why and what you had programmed before of dimmers relay and you will start programming different types of button modes and you will enjoy the difference programs setting and you will feel the powerful.

*In lesson 5* you will have different experience with the HVAC Air condition programming, you will know the flexibility and functionality you have of Single and Multi stage compressor and VAV control.

*In Lesson 6* you will be able to program the magical LCD DDP for its lighting and Air condition control function, you will be able to edit and download picture for each button and make the LCD setting

In Lesson 7 you will be able to program Music system (Z-audio2) and how to control it from DDP.

*In lesson 8*, you will be able to program the motion sensor and get basic introduction about home automation programming And you will be able to take the codes from any remote and use it in S-bus Network like (spilt AC remote, Satellite remote, DVD Remote).

In Lesson 9 you will be able to control and integrate any device using Rs232 OR Rs485 connection (projectors ,RFID) .

In Lesson 10you will be able to make daily events automatically, activate all sensors at sunset, and deactivate at sunrise, Make your own conditions for special events, put timer for deferent events.

## 2- Start Programming

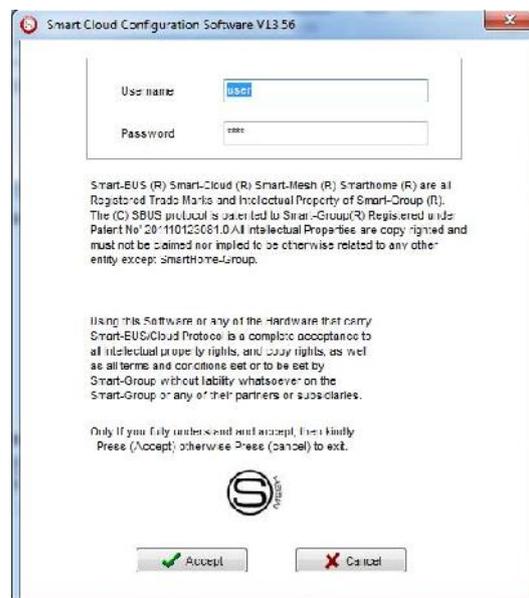

In smart home G4 there are two ways For Programming:

- 🚦 Manual Way (For Basic Programming).
- 🚦 Pc /Laptop Way (For Basic and Advanced Programming).

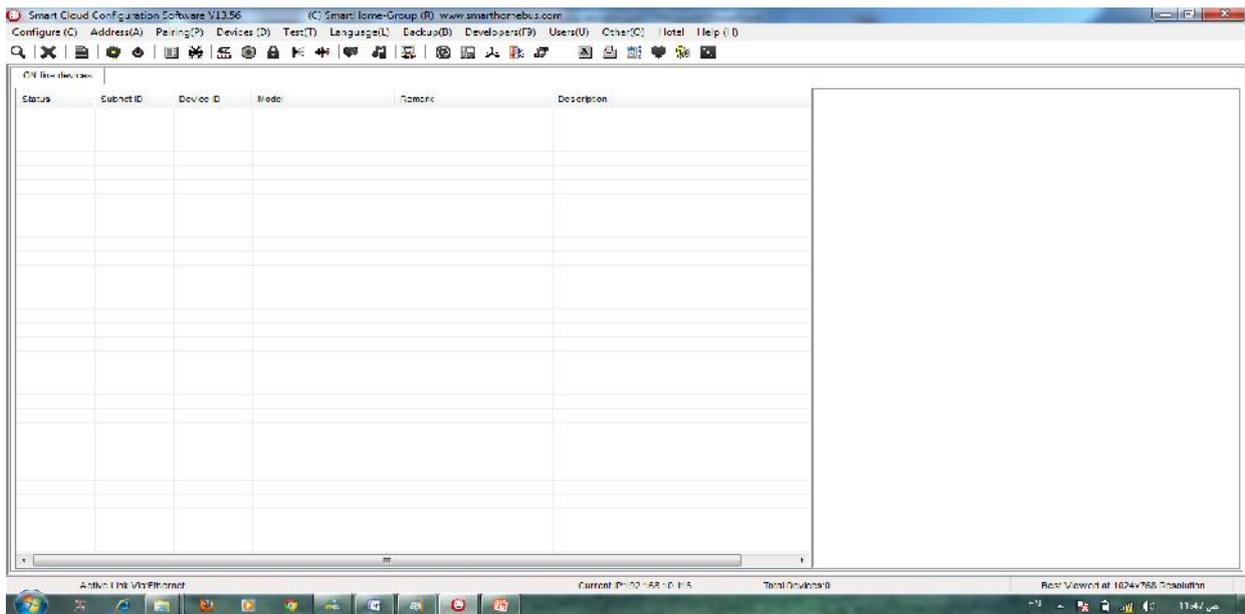

### 2-2 S-Bus Programming Software overview

You need on this lesson to have your computer with you. Running on windows Operating system, Smart Cloud **G4** software, programming port SB-DN-11P, that enable you to search for all the devices that connected to the bus network.

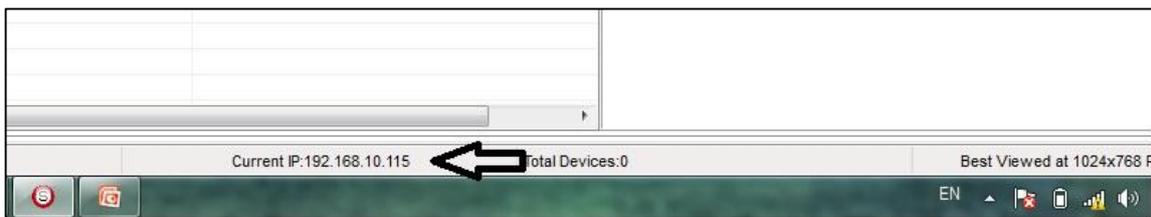

- 1- Install your S-bus configuration software in your Computer by pressing the **Setup** icon and follow the installation steps windows
- 2- Set your computer IP Address, for example  
IP            192.168.10.10  
Subnet      255.255.255.0  
Gateway    192.168.10.1
- 3- Run your S-bus configuration Software
- 4- The Password window will open, type the default password is **user**

5- Your software will start

6- You can see your current IP on the footer of the software as 192.168.10.115 then your IP setting is ok.

 *Set your computer IP setting before starting the S-BUS configuration software.*

## 2-3 Installer Programming Ethernet Port overview

### The S-Bus Programming Ethernet Port

- New: small Portable Programming Ethernet Port
  - Direct power from Bus network (no need 220 V)
  - Small size
  - No LCD , Setting will be done from software

### The Programming Ethernet Port has the following function

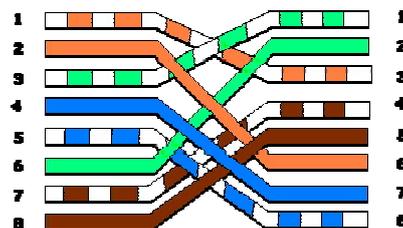

- a- Used as programming port between your computer and the S-Bus devices.
- b- Used as Network bridge for big project network that need more than 255 devices
- c- Used as a bridge between Touch screen IP to Bus network.

 *You should always reset your Module every time you change the IP Address in order the new setting to be Active.*

After you set your Module IP Address now you should connect the module to Your Computer Network in order to communicate. The connection can be in two ways

- 1- Connect the 1Port IP Module to the HUB or Data Switch and connect your Computer to the same data Switch as standard straight cable Network wiring.
- 2- Without using the HUB or data switch you can use the cross cable to connect your computer directly to the IP Module, see the next cross wiring diagram of TIA/EIA 568B crossed wiring

**TIA/EIA 568B Crossed Wiring**

*You can use the Line command **Ping** to check your connection.*

*On your Computer, Go to start/ Run/ CMD then type **Ping 192.168.10.xxx***

*If you see the following results similar to this Picture then your connection is successful*

```
C:\WINDOWS\system32\cmd.exe
Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

C:\Documents and Settings\Administrator>Ping 192.168.0.1

Pinging 192.168.0.1 with 32 bytes of data:

Reply from 192.168.0.1: bytes=32 time=45ms TTL=64
Reply from 192.168.0.1: bytes=32 time=39ms TTL=64
Reply from 192.168.0.1: bytes=32 time=2ms TTL=64
Reply from 192.168.0.1: bytes=32 time=2ms TTL=64

Ping statistics for 192.168.0.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 2ms, Maximum = 45ms, Average = 22ms

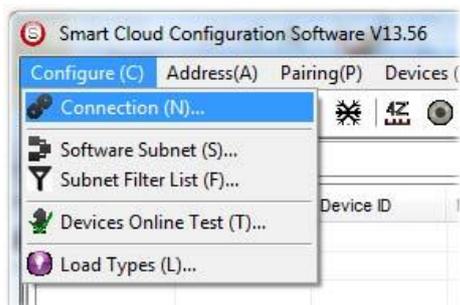

C:\Documents and Settings\Administrator>
```

*Always the Programmer should carry with his programming kit the cross cable for programming without needs of the Data Switch or HUB.*

## 2-4 S-bus configuration Software basic setting

### Configure

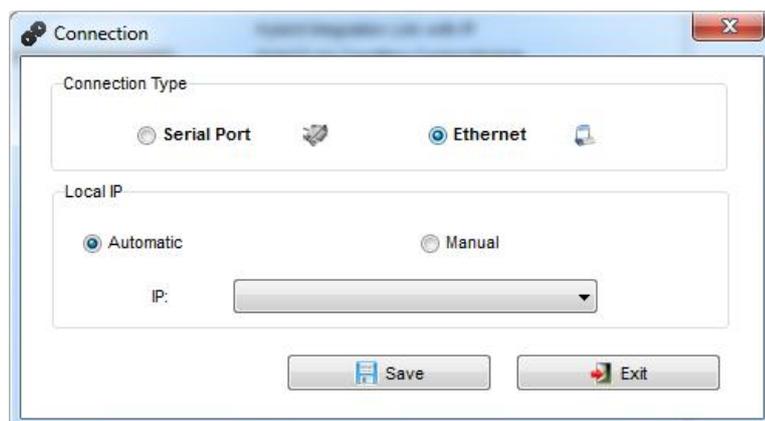

- *1- Connection*

You can change between Ethernet Connection and Serial Port connection,

the Serial Port connection is old, slow and no longer use. Always Keep the setting on Ethernet connection

Also you can choose between **obtain Local IP Automatically** (Default) , or to **input local IP Manually**.

*Input local IP manually you can use it for example, if you are using in your laptop or computer Wireless and wired Network with different IP setting, and you want to choose the right one of it for programming, and don't want your S-bus software to detect your other IP address Automatically.*

- **2- Software Subnet ID**

The S-bus configuration software have fixed Device ID (254), but you can change its subnet ID only, the default software subnet is (Default = 254)

*The software default subnet ID address is 254, Device ID 254, this address must be unique, in case other Device has the same address you will not be able to find that Device unless you change the Subnet of the software.*

- **3- Subnet Filter List:**

Here you can filter your subnet ID's that mean you can add more ranges if you have more than 254 devices so you can add another subnet ID

- **4- Devices On-Line test**

You can Deactivate or activate the auto test of Online devices (Activate is Default).

- **5- Load type**

You can add some Remarks to your Load type to use it as reference and print it out later on the excel sheet.

### **Address**

Here you can search for the Device Addresses and load the Network and solve any conflict in the address. (For more Information see 3-2)

### **Pairing**

You can enable pairing or disable either for one device or for all devices, disable meaning you can't program S-bus modules in manual anymore until you enable it again.

### **Devices**

You can go here directly to Devices setting Categorized by type

### **Test**

This is important Function to check your Lights Circuit by flashing the lights ON/OFF and then you can give it name (for more information see 3-3 section).

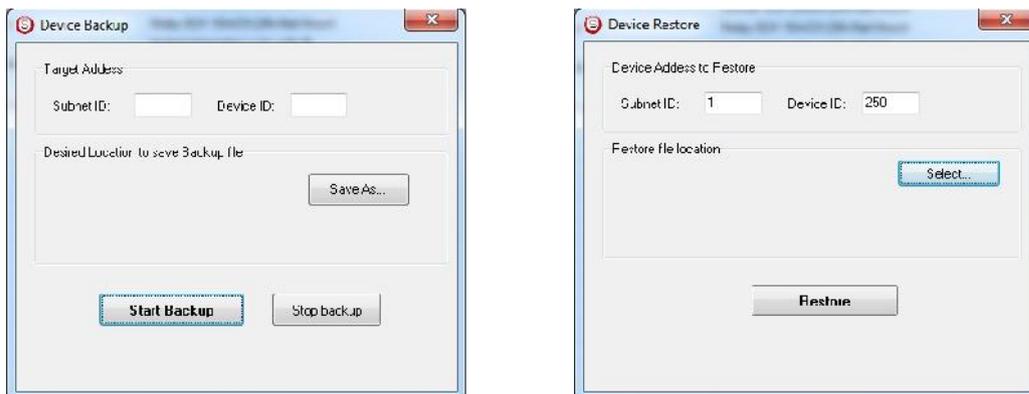

### **Language**

You can change the Language between English and Chinese, and other Languages

### **Backup**

Important to backup and restore your Devices address and setting.

- For Backup: put the subnet and device ID for desire device , choose the location for the backup file then click "Start backup" ,
- For Restore: put the subnet and device ID for desire device, choose the backup which you already made then click "Restore".

## **2-5 Devices address and Search:**

Each of S-bus Devices must have its own Address in the Network, the Address for each Device consist of 2 parts:

- ❖ **Subnet ID**
- ❖ **Device ID**

The subnet ID can be from 0 – 254

And the Device ID can be from 1 – 254

So you can put up to 65024 Deferent Devices in the same network with deferent subnet and device ID Address

For example one of Dimmer Module Address is (Subnet 1, Device ID 5)

### **There is 5 ways to Search for the Devices in the Smart cloud Software**

- 1- Fast Search
- 2- Advanced Search
- 3- Manually Search
- 4- Broadcast Address Device Search
- 5- Solve Conflict address search

### **Fast Search**

The Fast search is very useful tools to test your communication and search your devices Fast , the Fast search take around 2-15 seconds to finish load the devices information in your network.

- Click on the **Scan** button
- Click on the **Fast search Button**
- Click **add all**
- Click **Exit** to exit the Window

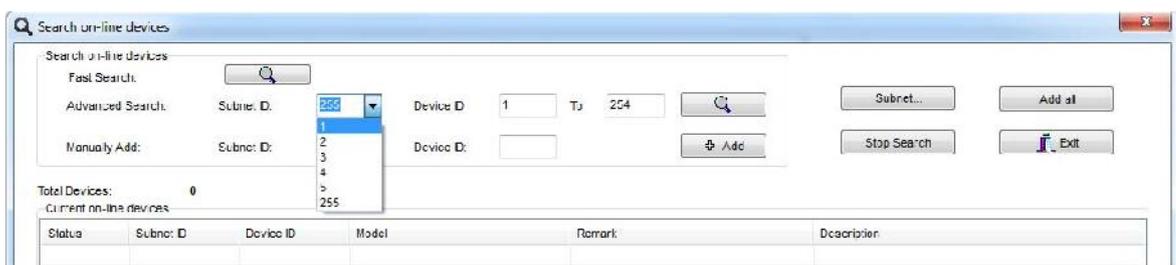

**!** *Fast search can't load all the Network Devices, it is only load part of the devices, it is only good for small project that contain around 10 devices, and to check the network communication with your PC.*

### **Advanced Search**

The Advanced Search is a powerful tool for searching your Devices in the network. You can set the Subnet ID you like to search on it and select the range of device ID you want to search for.

Advanced search take 0.3 seconds for each device to load and total of 80 seconds to finish the search and load for 255 devices totally in each subnet.

- Click on the Online Search button 
- Go to **advanced search** , put the subnet ID and the range of device ID search

- Click **search ICON**
- Click **ADD ALL** after the search finish
- Click **Exit** to exit from the window
- click **stop** to stop the search
- Click **subnet** to add new subnet to the popup Menu subnet list

*Use the Advanced Search Always as your standard way to Load the Devices in the Network to your computer before you program in any new*

## Manual Search

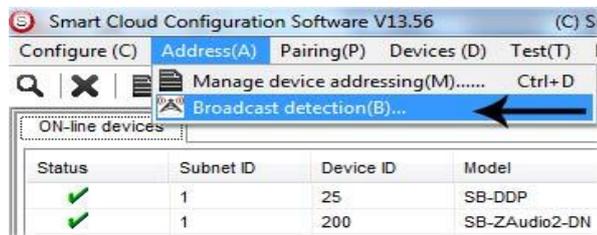

Manual Search is a very fast and useful way to add known Device ID and subnet to your network

Manually Add:	Subnet ID:	<input type="text"/>	Device ID:	<input type="text"/>	<input type="button" value="Add"/>
---------------	------------	----------------------	------------	----------------------	------------------------------------

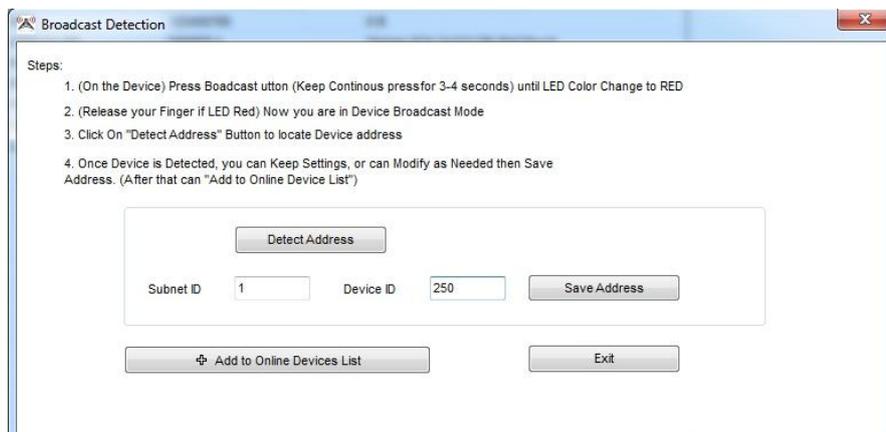

- Type the subnet and device ID that you know
- Click ADD
- Exit the Menu

## Broadcast Address Device Search

This tool is important when you add new devices or you start your new Project installation, many devices could have the same Address or the communication is not yet tested, this tool is important to check the communication between your device and the bus network and to change its initial address in the first time installation.

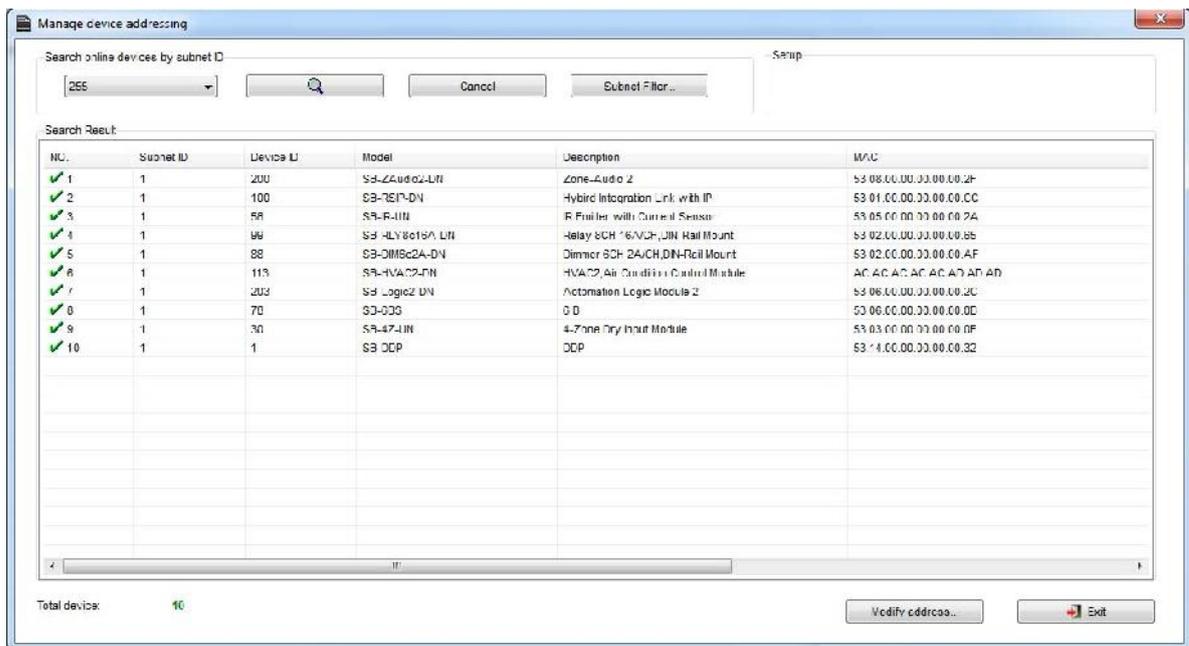

- On your software Click **Address** then **broadcast detection**
- Go to your device like Dimmer / Relay / sensor or Panel and keep pressing the **broadcast Address button** for 2 ~ 4seconds until the button LED color change to **RED**.
- In your software in the Broadcast Detection window click the **Detect Address Button**.
- Your Device ID and Subnet well appear automatically
- To change the address just type the new subnet ID or device ID you want then click **Save Address**
- Click **ADD to online device list** to load your device in the Devices Network List.
- Click **Exit** to Close the Window

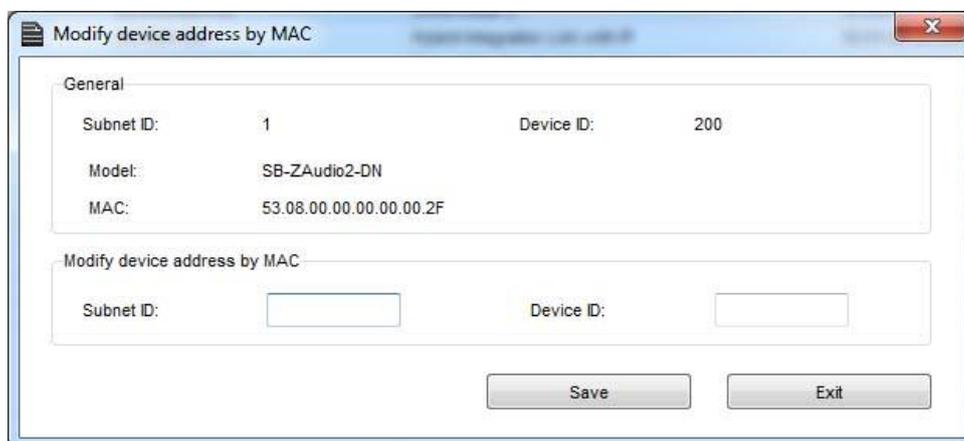

## Solve Conflict address search

This type of search used to solve the conflict address, for example if 2 devices have the same address, then you can easily change the address of it without the need of disconnecting its wires from the network.

- Click **Address** or click the Address Shortcut icon 

- Select Subnet **255 (recommended)** or any desired subnet then click the search icon.
- Select the device you want to modify its address then click **modify Address** or double click on it
- New window will open, and then type the new Subnet ID and Device ID, then Click **Save**

## 2-6 Steps of Basic Programming

The Basic Programming for Lighting Motor and HVAC of S-bus Products has procedure of Basic Steps as following

- A- Check the communication between your computer and the Bus
- B- Broadcast each Dimmer, Relay, Motor curtain HVAC control initial Address
- C- Change the initial addresses to the desired one (**kindly check 2.6.1 for addresses range**).
- D- Give name of each Dimmer, Relay Module (Remark).
- E- Check each Lighting channel circuit if working and connected good
- F- Give name for each channel (remark).
- G- Make an excel sheet for all your Dimmers, relays, other module address and circuit name.
- H- Make Area for each Dimmer, Relay module if required .
- I- Make Scene and Sequence for each Module if required .
- J- Make safety power restore and delay time for scenes and safety as required.
- K- Check the curtain module gives it address and name.
- L- Set the channel name, the running time open and close running time.
- M- Give the switch (6 gangs) and panel (DDP) its addresses and game.
- N- Assign the panel button to the corresponding scene or channel.
- O- Set the button graphic picture for the DDP for each button.
- P- Check the HVAC address give it address and name.
- Q- Set the On OFF delay sequence.
- R- Set the VAV Voltage output if required.
- S- Set the safety HVAC running sequence
- T- assign the DDP Panel to its HVAC unit.
- U- Set the FAN speed, cool set point, type, adjust temperature sensor on the panel setting.
- V- Set the required graphic for AC, and panel basic setting
- W- Search for PIR motion sensor and give it address and name
- X- Set the sensitivity, way of triggering, motion, no movement delay and commands
- Y-connect the Z-audio 2 to the s-bus And address it
- Z- Test and enhance your programming.

*Following the basic Programming steps procedure will save the programmers time and effort.*

### 3- Relays and Dimmers Programming

Relays and Dimmers are the main modules for every lighting control system, the Leading Edge Dimmer, and smart relay save 30-70% of your lighting Energy consumption.

#### 3-1 Relays and Dimmers type overview

S-bus Dimmers and Relay have many types that you can install in any project

##### 1- Dimmers

- DIN-Rail Mount Dimmer 2ch 6A
- DIN-Rail Mount Dimmer 4ch 3A
- DIN-Rail Mount Dimmer 6ch 2A

##### 2- Relay ON/OFF controller

- DIN-Rail Mount, Relay Module 3CH, 1A
- DIN-Rail Mount, Relay Module 4CH, 20A
- DIN-Rail Mount, Relay Module 4CH, 16A
- DIN-Rail Mount, Relay Module 6CH, 16A
- DIN-Rail Mount, Relay Module 8CH, 10A
- DIN-Rail Mount, Relay Module 12CH, 10A

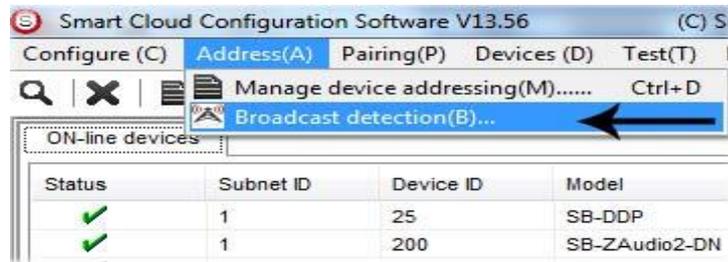

#### 3-2 Setting Relay and Dimmers Address

When you install the Dimmer or relay first time, it takes default address as Subnet ID 1, Device ID 6. To change the address and check the communication you should use the *Broadcast Address Device Search* as you see in the section 2-5 before)

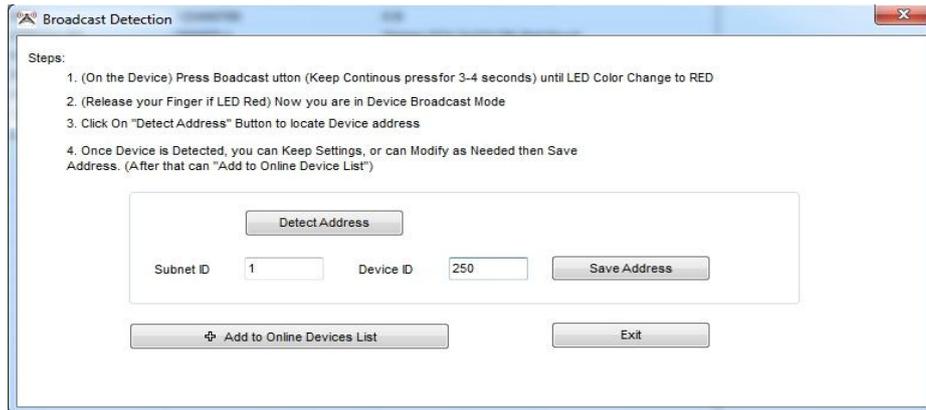

*Every Din rail Module have Broadcast button as you can see in this Picture*

- On your software Click **Address**

- Go to your device like Dimmer or Relay then keep pressing the broadcast Address button for 3-4 seconds until LED color change to RED.
- In your software in the Broadcast Detection window click the **Detect Address** Button.

- Your Device ID and Subnet will appear Automatically
- To change the address just type the new subnet ID or device ID you want, then click **Save Address**
- Click **Add to Online Devices list** to load your device in the Devices Network List.
- Click **Exit** to Close the Window

### 3-3 Channels search and Remarks

After you finish editing the initial Address for each Dimmer and Relay, Search for all Modules in the network using the Advanced Search, after that you can start giving different Name in the remarks for each Module.

- Double click on the Module that you see on the List after searching to open it for editing
- In the Remarks field type the name of the Module
- Click save after you type the name

 *Without giving name to the Dimmers or Relays in your Project, the program will be hard for any programmer to understand, troubleshoot, and enhance the program in the future; name and remarks always will help every programmer to do the programming*

 *Always Give the Dimmers and Relay name that refer to its Location, for example if the Dimmer install in the floor 10 Apartment 20 then you can give it name for example DIM-10-20-A the next Dimmer in the same apartment can be DIM-10-20-B and so on and sticker Labeling can be stick on the dimmer Module itself with the same name*

### Testing Channels online:

After we gave Address and name to the Dimmer, now we must test it channel and gave it name.

- In your software Menu go to **Test**
- set the Interval of seconds that will be flash the Light channel ON/OFF within this time (2 seconds is Default) after Editing it Click Save
- Edit the Subnet ID, Device ID of your Dimmer or Relay and Its Light Channel you want to test then click save

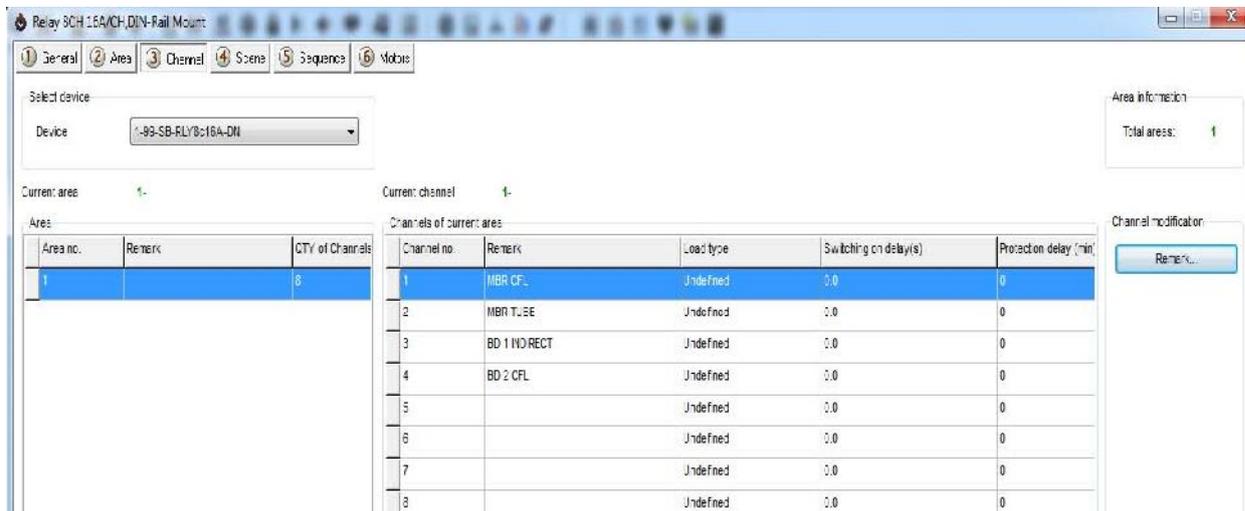

- Click start test button, than light icon will start Flashing ON/OFF
- Go to the channel light in your project that connect to this channel and see if the light is flashing or not.
- If the light channel is flashing ON/OFF that mean your connection is fine, then you can click stop test.
- Give the name of this Light channel in the channel remarks field then click save
- Go for the next light channel test, click save and follow the same steps for each module channels in your project.

Channel Remarks is very important for any programming, Programmer should edit all the remarks in simple and clear way to refer to the lights Channel name.

### 3-4 Relay Channels Setting

Relay channel setting will allow you to edit the channel remarks in faster way if you have the List of your connected channels on your relay before testing it, also you can edit for each channel the load type remarks, Switch On Delay (Seconds), and Protection ON Delay (Minutes)

Double click on any relay Module on the List the relay setting window will appear go to the Channel tab, and start editing

**Channel Remarks:** it is another fast way to type your channels of your module in simple way.

**Load type:** to edit every channel load type as reference remarks

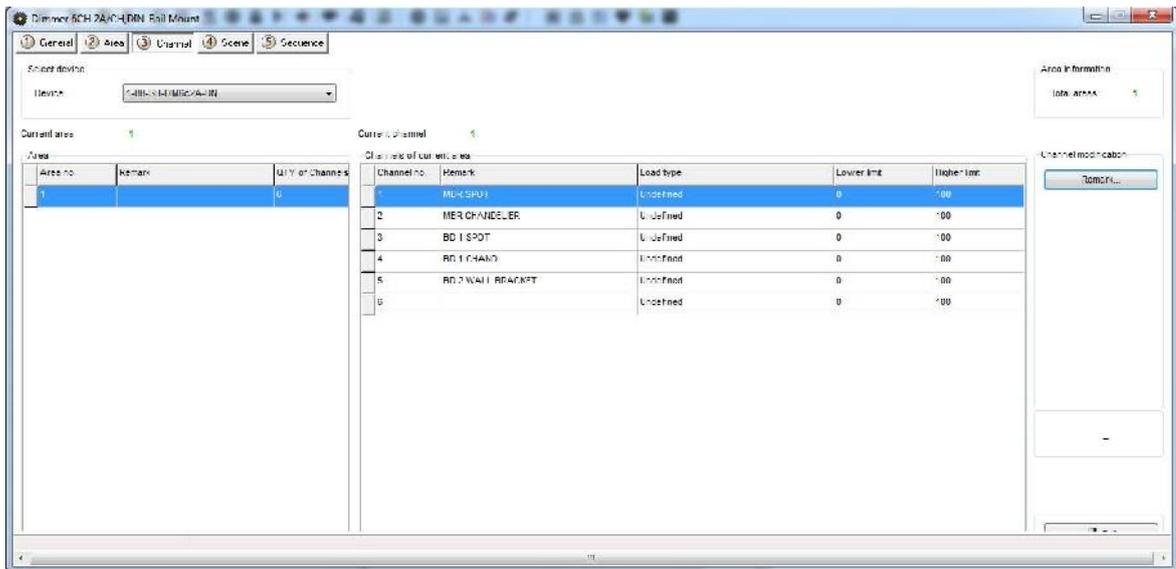

**Switching On Delay:** for industry and some motors connection needs to delay the Relay to be ON from (0 to 25 seconds) for each channel

**Protection Delay:** is used for industry use mainly and some heavy duty Machines for safety ON by long time delay range from (0 – 60 Minutes)

### 3-5 Dimmer Channel Setting

In the Dimmer channel setting you can edit your Dimmer Lighting channel Remarks, Load type remarks, Lower Limit, Higher Limit.

Double click on any Dimmer Module on the List then the Dimmer setting window will appear go to the Channel tab, and start editing

**Channel Remarks:** it is another fast way to type your channels of your module in simple way.

**Load type:** to edit every channel load type as reference remarks

**Lower Limit:** in this setting you can sit the lower Limit that you can dim to, beyond this level the Light will turn off totally.

*Lower Limit Option is useful when you connect a florescent Light that can't be dimmable to Dimmer module channel and you don't want it to be flickering when low voltage supply the florescent*

*if you don't want the florescent light to be ON while you make diming with fade time for all your channels than you can set the channel Lower Limit as 90% if connected to florescent or not dimmable light*

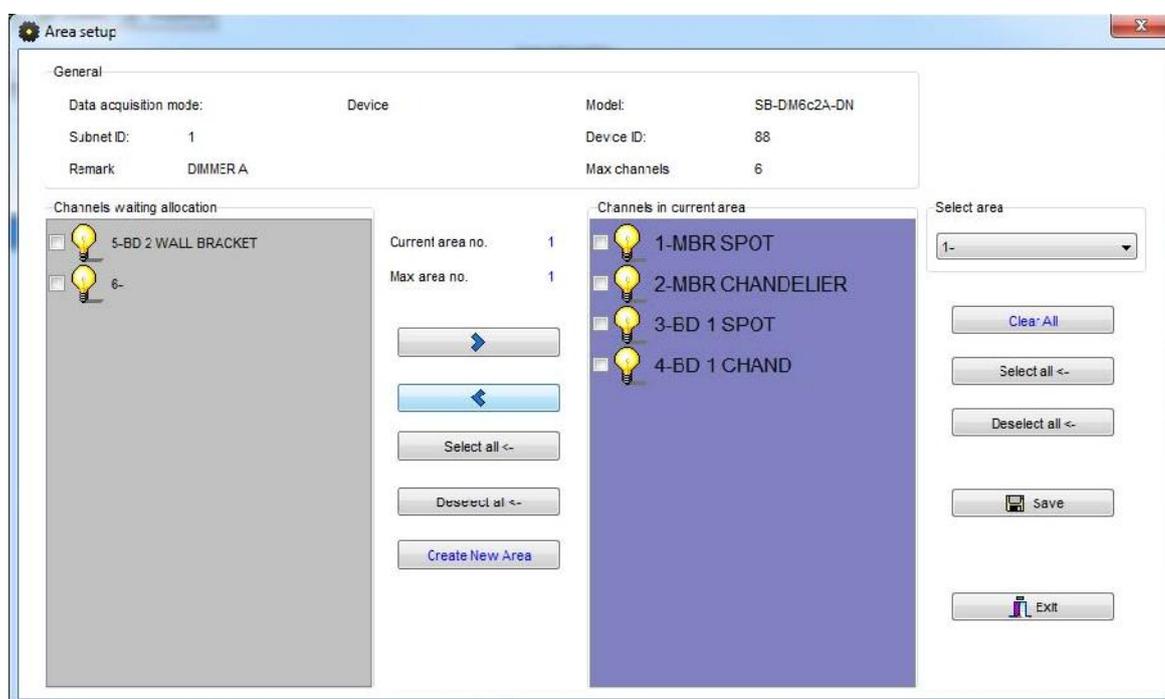

**Higher Limit:** in this setting you can sit the Higher Limit that you can Ramp to, Beyond this level the Light will turn ON to the maximum level.

## 3-6 Area Setting

In the Area setting you will divide your dimmer or Relay channels to different Area according to your project installation, each Area will have its scenes and sequences.

For example: if you have an apartment of 2 bed rooms, all its channels connected to the same dimmer, that mean you can divide the dimmer channels into 2 areas , type name for each area and later you can set the scenes and sequences of each Area separately.

- Double click on any Dimmer or relay on the List
- Got to **Area** Tab
- Click **Area Setup**
- By default all channels is included in Area 1, Remove the channel that not belong to this area by checking them and click the **Left Arrow**.

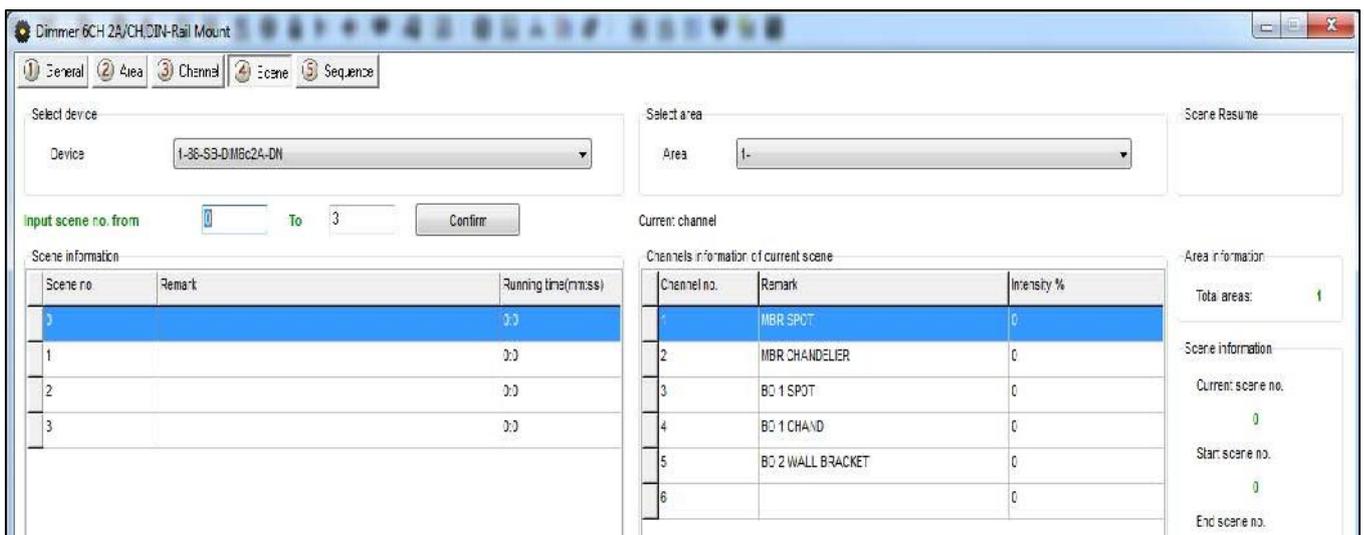

- Click **Create Area** to Add new Area
- Insert the remaining channels on this Area by pressing the **Right Arrow**
- When you create all you Area and assign Channels to it, Click **Save** and Click **Exit** to close your Area Setting
- Click **Area Remarks** and edit your Area names, then Click **Save** then **Exit**.

### 3-7 Scene Setting

After you complete your Area setting, then you can assign Different Scenes for Each Area you create

- Click on the **scene** tab
- **Select the Area** on the select Area section
- Input the scene number you want to edit From ... To then click **confirm**
- Click **scene setup** to edit your scenes

- Edit the scene by modifying the output brightness and then click the next scene on the right list to edit it.
- Edit the scene running fade time on Minutes and seconds
- After you finish editing your scenes, click **save** and **exit**.
- Click **Remarks** to give the hint name for your scenes, click **save** and **exit**

**You have many tools to help you editing the scenes**

- Modify running time synchronously**
- Modify scene intensity synchronously**
- ON-site run scene**

- **Modify Running time Synchronously** to apply the change effect for all the scenes running time together
- **Modify scene intensity Synchronously**, to modify all channels output level together
- **On-site Output scene**, to see the effect Live on your room before saving the scene.

Creating Area and scenes in the Modules is recommended for faster respond that control many channels in the same command.

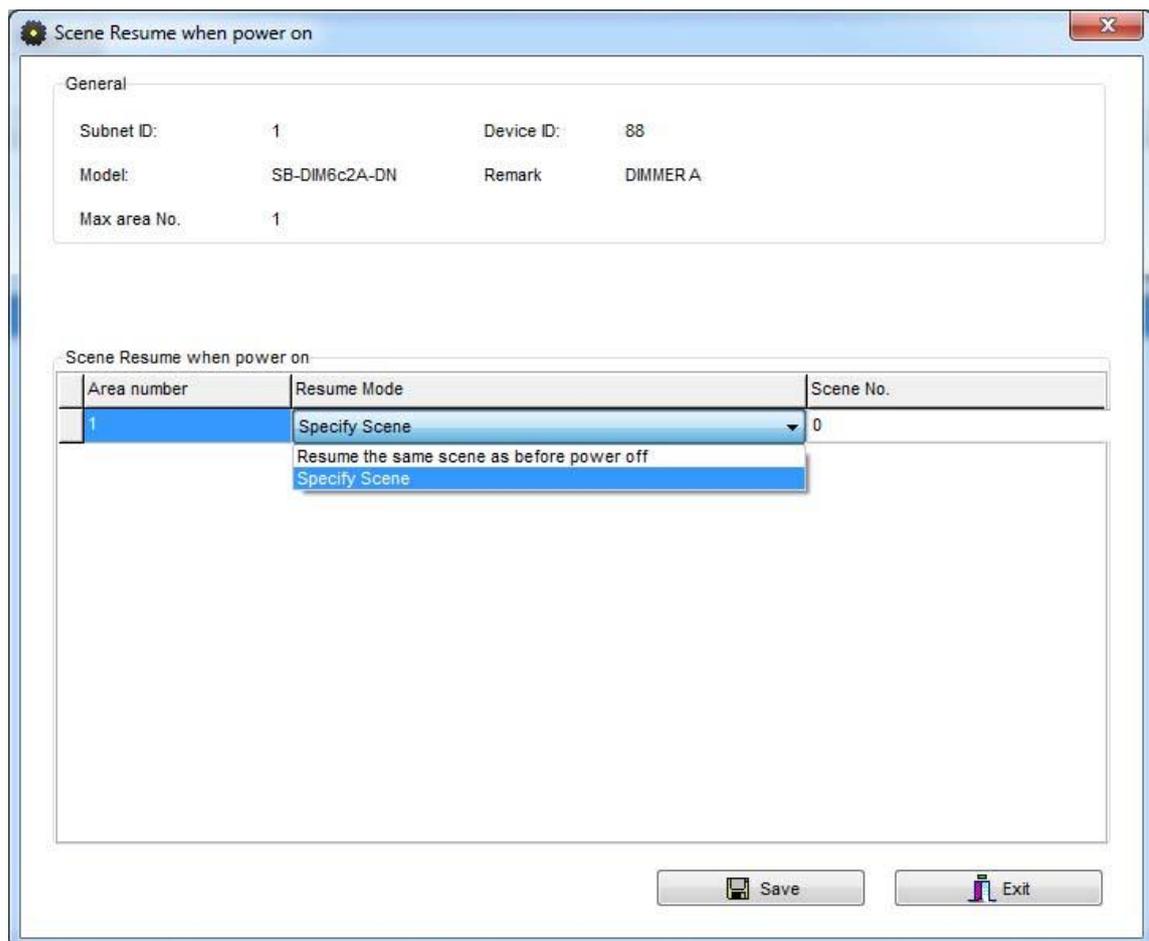

Every area has Scene 0 and it is not modifiable, and always Pre-Programmed as scene Off that set all the channels Lights of the area to 0%.

### 3-8 Scene Resume

This setting is very important for the dimmer in case of Power failure. The scene restore is the specified scene that the dimmer module will run it once the Power restore after the electricity down.

- Click **scene** tab then click on scene Resume
- Select one of 2 options,
- **1- Resume the same scene before power off,**
- **2- specify scene**

- Remember Scene **0** it mean all Lights on the Area will be OFF when the Power restores.

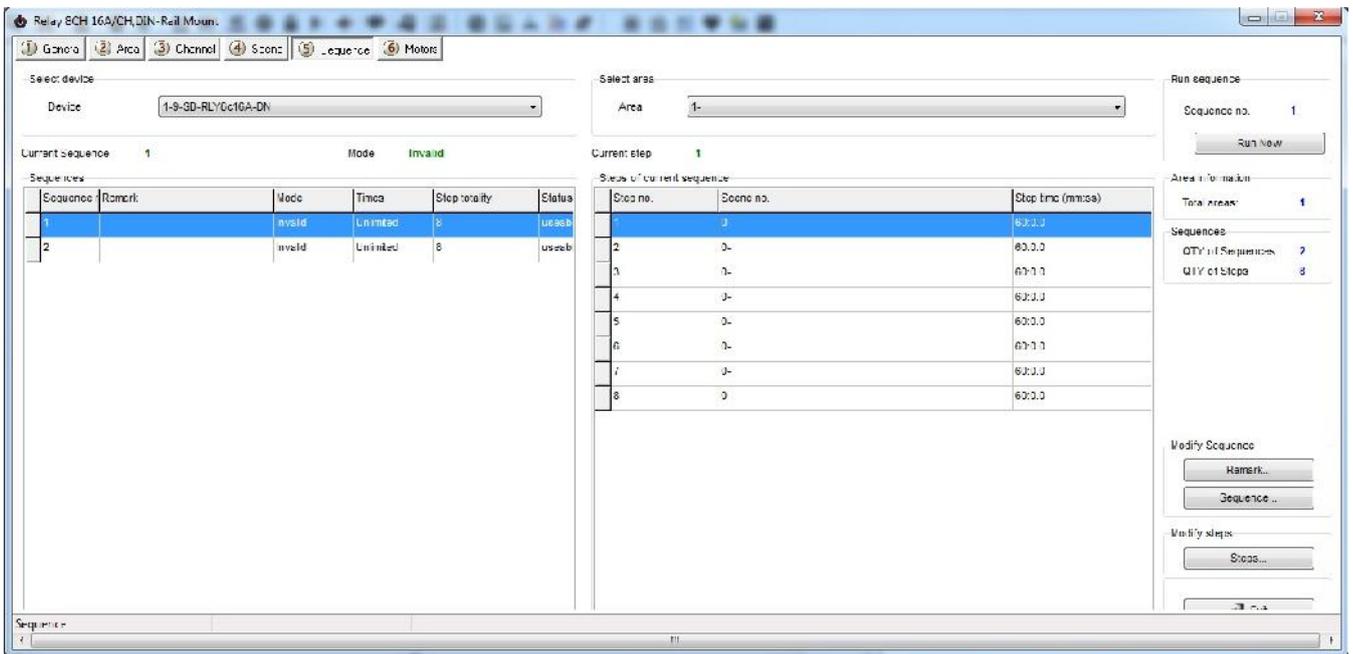

Restore to scene 0 is useful for many applications to save the Electrical parts when the power came in higher load from the main usually.

### 3-9 Sequence Setting

Sequence setting is used to make Lights show and some other needed application in industry, security and others.

- Click on the Sequence tap

- Click on **sequence** Button to edit the sequence
- Select the mode you want

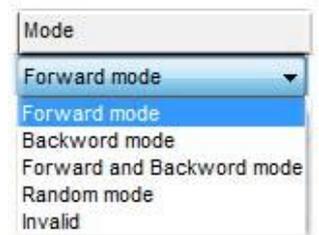

**Invalid:** not used

**Random:** will run the sequence scenes in random way

**Forward, and backward:** will run the scenes from first scene to last one then from last to first

**Backward:** will run the sequence scene from last to first

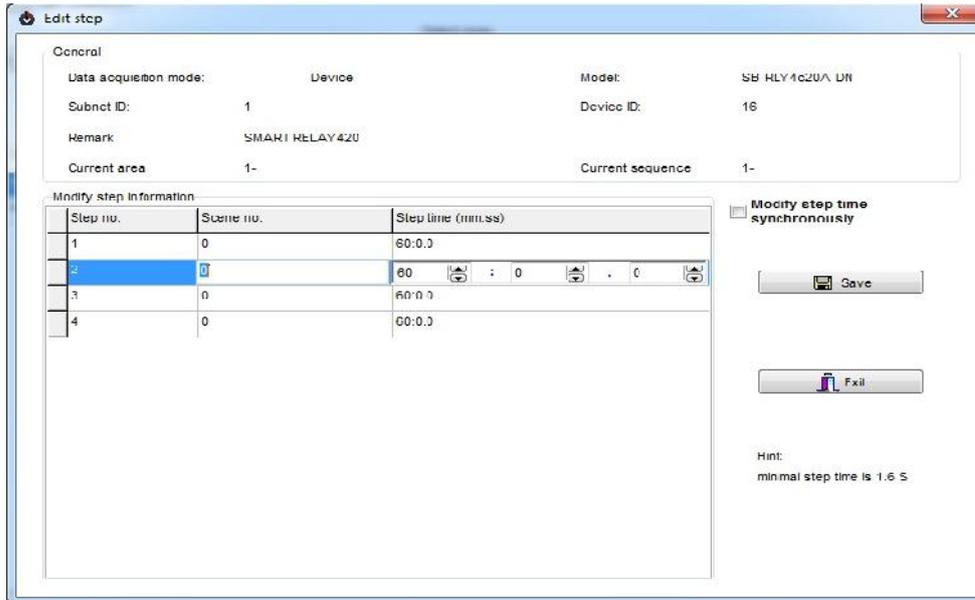

**Forward:** will run the sequence scene from first to Last

**Times:** the sequence can be **Unlimited** forever running, or will run from 1 time to 99 times.

**Step totally:** is the sequence scenes steps number that want to be include it in the Sequence

- After you finish editing your sequence setting, Click **save** and **exit**.

- Click Remarks to edit your Sequence name
- Click **Steps** to edit your sequence steps
- Edit your **scene number** in each step
- Edit your step time **interval on** Minutes, seconds and part of seconds
- Click **Save** and **exit**

 Relay Module that support the sequence like SB-DN-R0816 and SB-DN-R0420, its Minimum step time interval can be 1 second.

## 4- Panel Switch Programming (6 gang)

### 4-1 Panel Switch Type Overview

The Switch panel in the wall is your interface to control your lights, curtain and other application

The S-bus button switch panels have many types, including the 6 button panel, 4 button panel, 3 buttons panel, 2 buttons panel, and 1 button panel.

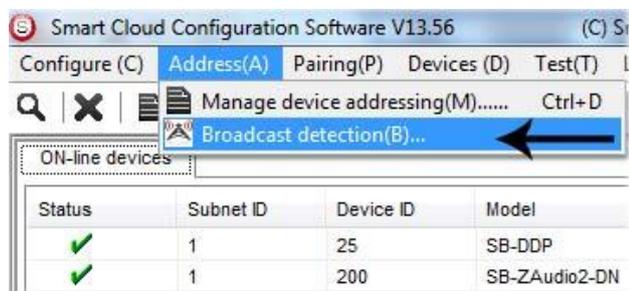

### 4-2 Panel Switch Address and basic setting

To change the address and check the communication you should use the *Broadcast Address Device Search* as you see in the section 2-5 before) Every Switch Panel has broadcast button inside it

Just click first button and keep pressing until red color coming.

- On your software Click **Address**

- On your Panel keep pressing the broadcast Address button for 4-5 seconds until LED turn ON
- In your software in the set broadcast detection window press the **Detect Address**
- Your Device ID and Subnet will appear Automatically

- To change the address just type the new subnet ID or device ID you want then press **Save Address**
- Press **ADD** to load your device in the Devices Network List
- Press **Exit** to Close the Window

After you load the Panel to the network, double click on it.

- In the basic setting you can type the panel name **remarks**, change its address subnet, and device ID
- Also you can change the **Backlight** brightness and **LED** indicator brightness of the Buttons

The screenshot shows a settings window with two main sections. The top section, titled 'Indicator intensity', contains two sliders: 'Back Light' and 'Status Light', both set to 100. The 'Status Light' slider has a 'Save' button next to it. The bottom section, titled 'Modify subnet ID and device ID according to MAC', contains two input fields for 'Subnet ID' and 'Device ID', with a 'Save' button to the right.

### 4-3 Panel Switch button Remarks and Modes

When we go to the Panel setting tab we will see all the buttons listed on the screen, by pressing the **mode** button we can change the Button function as you can see on this picture

The screenshot shows a window titled 'Edit: button mode'. It has a 'General' section with fields for 'Data acquisition mode', 'Device', 'Model' (SB-66S), 'Subnet ID' (1), 'Device ID' (78), 'Remark' (123456789), and 'Eulton totality' (6). Below this is the 'Modify button mode' section, which contains six dropdown menus numbered 1 through 6. All dropdowns are currently set to 'Single on/off'. A dropdown menu for item 5 is open, showing a list of options: 'Invalid', 'Single on/off', 'Single on', 'Single off', 'Combination On', 'Combination Off', 'Pressing Or/Release Off', 'Combination on/off', 'Dbclick and Single Or/Off', and 'Dbclick and Combination Or/Off'. At the bottom right, there are 'Save' and 'Exit' buttons.

## Panel Switch Button Mode Setting

How to use	Where to use example	Function	Mode
No use	When you have extra button that you don't need to use it	No function	<b>Invalid</b>
Single Press	In room off mode to close the Light channel	To OFF Light or scene, every time you press it	<b>Single OFF</b>
Single Press	Usually used to trigger scene like visitor, meeting mode etc..	To run scene ON , or Lights on every time you press	<b>Single ON</b>
Single Press ON , Single Press OFF, keep pressing Dim/ keep pressing Ramp	Widely use for ON/OFF light , scene by single press	The classical use of toggling of single press ON/OFF	<b>Single ON/OFF</b>
Single Press	to Run complex mode that required more than 1 scene and mode by single press	To trigger up to 99 different commands every time the button pressed	<b>Combination ON</b>
Single Press	To OFF complex mode that required more than 1 scene and mode by single press	To OFF up to 99 commands every time the button pressed	<b>Combination OFF</b>
Single Press ON commands, Single Press OFF commands	To run ON and OFF complex mode that required more than 1 scene and mode by single press	To trigger up to 99 commands toggling between ON/OFF each time the button pressed	<b>Combination ON/OFF</b>
Double fast click on the right button side to trigger double click function, Single Press ON, Single Press OFF, keep pressing Dim/ keep pressing Ramp	Used as extra function to trigger any other scenes on double click of the same button, like Double click can trigger ALL room off	To use the double click to run up to 49 commands while single press will toggle between ON/OFF of different commands	<b>Double click, single switch</b>

Double fast click on the right button side to trigger double click function, Single Press ON, Single Press OFF	Used as extra function to trigger any other scenes on double click and different one for single Press	To use the double click to run up to 49 commands while single press will toggle between 50 commands ON/OFF	<b>Double click, Combination switch</b>
Keep pressing to keep sending on command, On release the OFF command will trigger	Used for example in Bell, gate motor , some IR commands	To run 1 command as momentary pressing	<b>Pressing on release off</b>

- To edit Button Remarks press **Remark** edit then **Save** and **Exit**

be careful when using Combination mode, the button will not have 2 way feedback statues , then the panel LED cannot be updated if the lights channel ON or OFF from other devices.

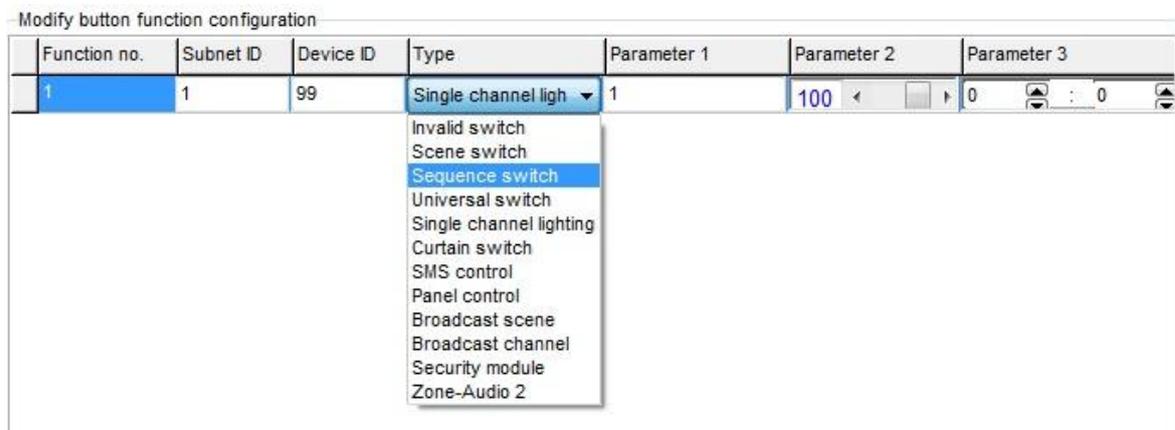

Try always to use Single ON/OFF, cause its 2 way updated and simple friendly use for the end user.

#### 4-4 Panel Switch button Function settings

For each button you can make different functions of different commands

- On the panel window go to key assignment
- Press on the Function button
- Press on type popup menu and you can select the function you want as you can see on the picture

- Press Save and Exit.

**The Button Function of switch panel you can make is listed down on this table**

Parameter 3	Parameter 2	Parameter 1	Function type
N/A	N/A	N/A	Invalid
N/A	Scene Number	Area Number	Scene Switch
N/A	Sequence Number	Area Number	Sequence Switch
N/A	ON / OFF	Switch Number	Universal Switch
Fade time 0S - 60 M	Brightness 0-100%	Channel Number	Single channel Lights
N/A	Stop / ON/ OFF	Switch Number	Curtain Switch
N/A	ON / OFF	IR Function	Panel control
N/A	ON / OFF	Lock key of panel	Panel control
N/A	ON / OFF	AC Power	Panel control
N/A	0-30 C , 32- 86F	AC Cooling Temp	Panel control
N/A	Auto/high/med/slow	AC FAN Speed	Panel control
N/A	Auto/Cooling/Heating/FAN	AC Mode	Panel control
N/A	0-30 C , 32- 86F	AC Heating Temp	Panel control
N/A	0-30 C , 32- 86F	AC Auto temp	Panel control
N/A	1-5 C/F	Rise temp	Panel control
N/A	1-5 C/F	Reduce Temp	Panel control
N/A	ON / OFF	LCD Backlit	Panel control
N/A	ON / OFF	Lock AC page	Panel control
N/A	ON / OFF	LCD status light	Panel control
Valid/INVA	Button No.	Lock Button	Panel control
Valid/INVA	Page No.	Lock page	Panel control
Valid/INVA	Button No.	Control button status	Panel control
Valid/INVA	Page No.	Go to page	Panel control
N/A	ON/OFF	Floor heating Pow	Panel control
N/A	Normal/day/night/auto/ away	Floor heating mode	Panel control
N/A	Scene Number	All Area	Broadcast scene
Fade time	Brightness 0-100%	ALL Channel	Broadcast
N/A	Away,night,disarm,panic ...	Area No.	Security
N/A	Sd-card , FTP, audio in, radio	Source control	Zone -Audio
N/A	Prev and next song, stop , play	Play control	Zone -Audio
Song No.	Play list No.	Play Specify Song	Zone -Audio

Each Function type is necessary for different Action

**Example of each one as the table below**

<b>Example of using</b>	<b>Function Type</b>
Is to disable the function	Invalid
Used to trigger the Scene that you create on the Dimmer or Relay Area	Scene Switch
Used To trigger the Sequence that you create on the Dimmer or relay Area	Sequence Switch
Used to send infrared code number, play show control list , set logic flag On or Off, set the hotel door bell services , disable or enable (Motion sensor, light intensity, zone port automation )	Universal Switch
Used to turn one channel lights on./off with special level and running fade time	Single channel Lights
Used to open, close or stop the curtain channel	Curtain Switch
Used to turn the Air condition , ON/OFF	Panel control , AC Power
Used to set the Air condition cooling desired temperature to 0-30 C , 32- 86F	Panel control Cooling Temp
Used to set the Fan type between Auto, High , Medium , Low	Panel control FAN Speed
Used to set the AC mode to run as Auto, Cooling, Heating , Fan only	Panel control AC Mode
Used to set the Air condition heating desired temperature to 0-30 C , 32- 86F	Panel control Heating Temp
Used to set the Air condition Auto mode desired temperature to 0-30 C , 32- 86F	Panel control Auto temp
Used to Rise the Temperature by 1-5 C	Panel control Up temp
Used to Lower the Temperature by 1-5 C	Panel control Down Temp
Used to set the Backlightof LCD ON / OFF	Panel control LCD Backlit
Used to trigger same scene number for all the Areas of the dimmer or relay	Broadcast scene
Used to turn ON/OFF or set channel to brightness level for the all channel of Dimmer or relay	Broadcast Channel

When choosing **Combination or double click** mode you have to input the function target number **from ... to** then press **confirm**

Input function no. from  To

Function configuration of current button

Function no.	Subnet ID	Device ID	Type	Parameter 1	Parameter 2	Parameter 3
1	1	99	Single channel lighting control	1(Channel no.)	100(Intensity %)	0:0(Running time)
2	2	89	Single channel lighting control	1(Channel no.)	100(Intensity %)	0:0(Running time)
3	3	89	Single channel lighting control	1(Channel no.)	100(Intensity %)	0:0(Running time)
4	4	89	Single channel lighting control	1(Channel no.)	100(Intensity %)	0:0(Running time)
5	5	89	Single channel lighting control	1(Channel no.)	100(Intensity %)	0:0(Running time)

When using **double click / Combination** you can change between each function setting in the radio log as the picture below

Input function no. from  To    Switch  Double click

Double click always will save the commands from 51 to 99, be careful when you change the button mode from double click to Combination mode only then the old setting of commands from 51 to 99 will remain Active.

Try always to refresh the page, to make sure not old wrong setting appears on the page, to refresh the page press right click on the mouse then press on **Refresh (Clear buffer memory, reread data from device)**

### Useful tools for editing your Functions

There are some useful tools to help you while you are making setting for multi functions together like the one in Combination and double click mode

Edit button function configuration

General

Data acquisition mode: **Device** Mode: **S-BUS**

Subnet ID: **1** Device ID: **78**

Remark: **123456789** Current button: **1**

Mode: **Double click and Combination**

Modify subnet ID synchronously  Modify the intensity synchronously

Modify device ID synchronously  Modify parameter 3 synchronously

Modify type synchronously

Modify button function configuration

Function no.	Subnet ID	Device ID	Type	Parameter 1	Parameter 2	Parameter 3
1	1	89	Single channel lighting control	1(Channel no.)	100(Intensity %)	0:0(Running time)
2	2	89	Single channel lighting control	1(Channel no.)	100(Intensity %)	0:0(Running time)
3	3	89	Single channel lighting control	1(Channel no.)	100(Intensity %)	0:0(Running time)
4	4	89	Single channel lighting control	1(Channel no.)	100(Intensity %)	0:0(Running time)
5	5	89	Single channel lighting control	1(Channel no.)	100(Intensity %)	0:0(Running time)

**Modify Subnet ID synchronously:** to modify all subnet ID together and save the time of editing each one alone

**Modify Device ID synchronously:** to modify all Device ID together and save the time of editing each one alone

**Modify type synchronously:** to modify all function type together and save the time of editing each one alone

**Modify the intensity synchronously:** to modify all Level brightness intensity together and save the time of editing each one alone

**Modify parameter 3 synchronously:** to modify all the parameter 3 together and save the time of editing each one alone which is depend on the type.

## 4-5 Panel Switch button Memory, Dimming, and LED Setting

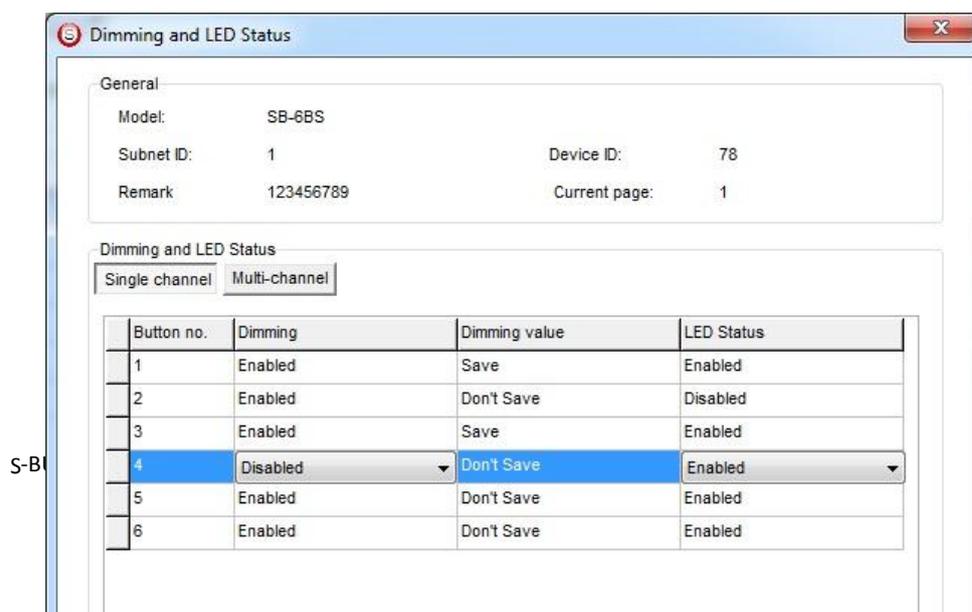

Beside the Button mode and function there are three important setting for each button

We can categorize it as:

- 1- **Dimming Enable / Disable:** it is simple setting you can use Dimming when your target lights is dimmable, while using not dimmable when your target is not Dimmable Lights.
- 2- **Save / Don't save :** the **save** will save the last Dimming value, every time you switch ON the light channel it will go to the last lights brightness Level you set before switching it OFF, while the **Don't save** will turn the lights brightness to the maximum level and not save the last statuses.
- 3- **LED enable / Disable Setting,** you can enable your 2 way Button LED statuses, while in some situation you need always to disable the button LED.

### How to make LED, Dimming, Save /don't save setting

- Go to **Button Assigination** tab on the panel setting
- Press on **Set button**
- Select the setting for each button you need

## Mutual Exclusion Function

This function is used on switch panel to link between two or more combination ON/OFF button mode to consider them as 1 group, and to prevent the confusion of using two related macros together.

- On the **Button Assignment** press on the **Mode linking** button
- Set the value to **YES** for all the buttons of combination ON/OFF to be as 1 group together

Buton no.	Remark	Mode	Enable mode linking
1	button 1	Combinaton On	NO
2	button 2	Combinaton on/off	YES
3	button 3	Single on/off	N/A
4	button 4	Single on/off	N/A
5	button 5	Single on/off	N/A
6	button 6	Single on/off	N/A

*Try to make two buttons as combination ON/OFF with many commands and set them mutual exclusion to YES and recognize the difference*

*Mutual exclusion is active only on Combination ON/OFF for the **6button panel**, while its active on all combination modes and double click modes of the DDP and new series of Wall switch panels).*

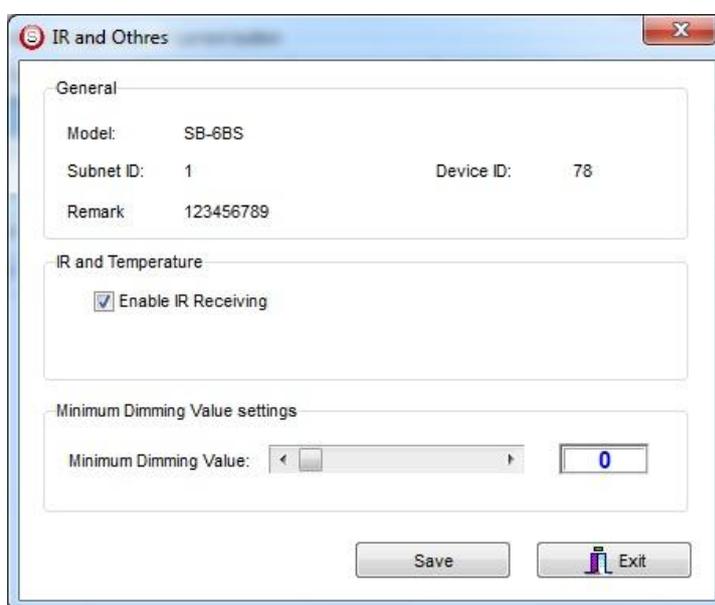

## 4-7 Panel Switch Setup (Minimum Dimming Value and Infrared)

**Minimum Dimming value:** is used to force the panel not to dim the light from the button by keep pressing it in order not to go below the minimum level of dimming

**Infrared function:** is used to enable or disable the IR receiving function on the panel,

To make the setting of the of the Minimum Level and IR setting

- Go to **Button Assignment** tab
- Press **setup** button
- Adjust the Minimum Dimming Value from 0% - 50%
- Uncheck the Infrared receiving function to disable or check the box to enable it

 *Minimum level is very important and useful function to avoid the confusion for the user when he dims some **SAVE VALUE** button to 10% and the spot lights will appear as OFF while it is 10% dimming, when the user press the button single press it will toggle between 10% and 0% and the user will think the lights is burned cause he will not notice the 10%.*

 *Minimum level recommended being as **20%** so the lights will not go below this level when the user keep pressing the button.*

 *IR disabling is useful when 2 panel near each other in 1 room and the remote control sending to the both panel and the functions is confusing the user, disabling 1 panel IR is recommended on this situation.*

## 5- HVAC2 Programming

HVAC module is the main module that control most of central air condition types, like AHU, FCU, VAV

### 5-1 Introduction of HVAC Module

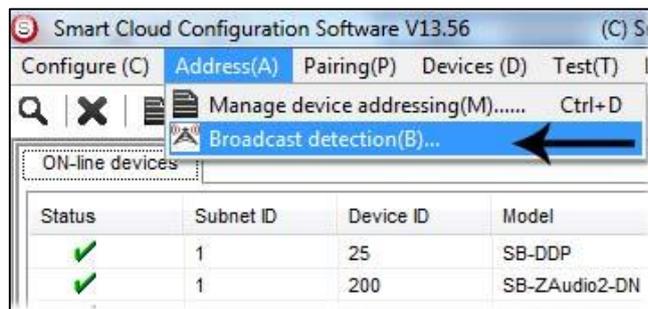

The HVAC module have 3 Mode relay type you can configure it as your requirement, each relay can be (Cool, heat, Aux (humidifier, dehumidifier))

with 2 FAN speed relays as slow and fast, with VAV control DC 0-10 V for 3 air speed as Slow, Medium and high

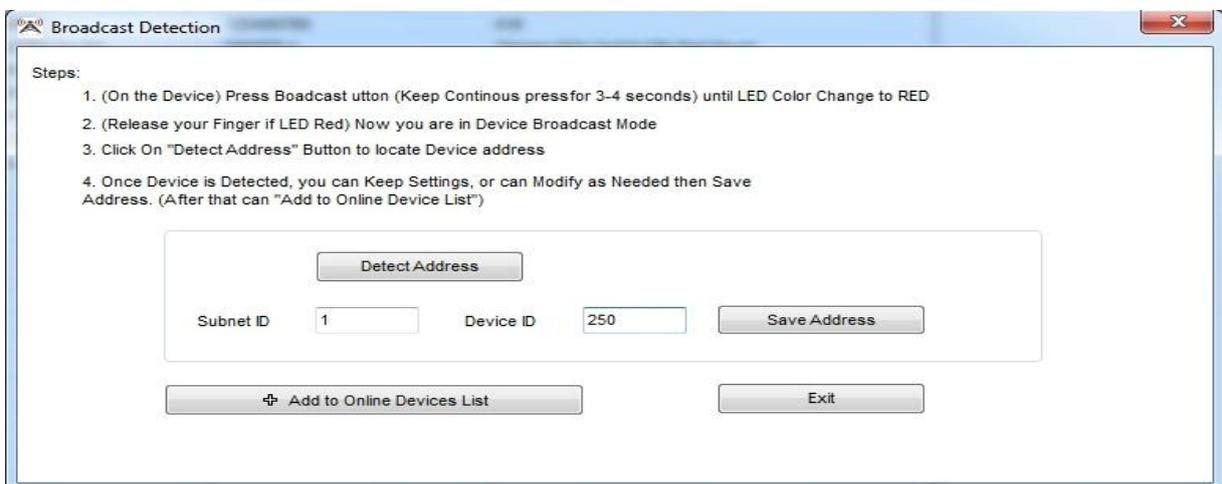

### 5-2 HVAC Address and Testing

Like all Din Rail Mount Modules, the HVAC module has its Broadcast Address button; to get the HVAC address you can do the following

- On your software Press **Address Management/ Modify Address**

- Go to your HVAC Module device, and then keep pressing the broadcast Address button for 3-4 seconds until its LED color change to RED
- In your software in the Broadcast detection window press the **Detect Address Button**

- Your Device ID and Subnet well appear Automatically
- To change the address just type the new subnet ID or device ID you want then press **Save Address**
- Press **ADD** to load your device in the Devices Network List
- Press **Exit** to Close the Window

After you load the device to your list, double click on the Module to open its configuration

On the basic information, you can add the name Remarks of your HVAC,

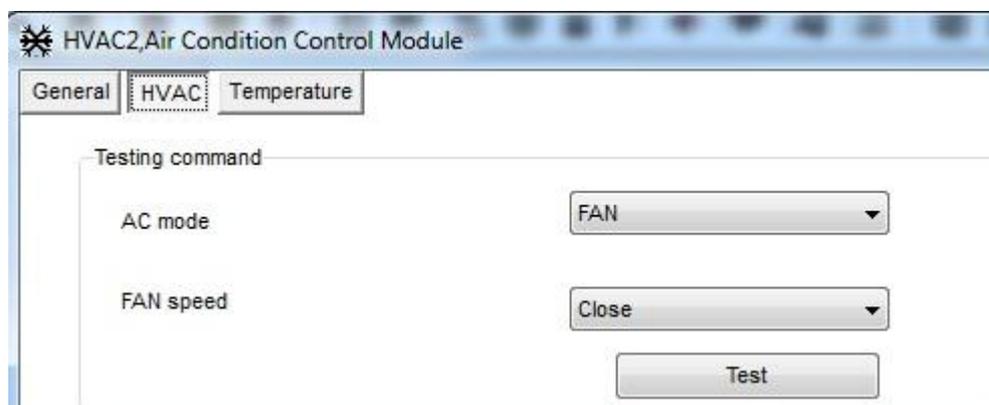

*It is recommended to give the name of the room or place that the HVAC is installed or running its AC, for example you can type the remarks of the HVAC as Living AC*

After you give the Address and name remarks for your HVAC module, it is the time to start checking the connection of the module to the unit.

To test the commands and see if the AC unit responding do the following

- On the HVAC page go to the **HVAC** tab
- In the test command section Select the fan speed you want to test it
- Press test then the relay of HVAC Fan should respond

Before you test the AC Mode cooling heating Modes or 0-10V output, you should configure the AC Mode and VAV setting (see 6-4, 6-5)

### 5-3 HVAC Startup and Switch off Safety Delay

Compressor Startup safety Delay is one of the most important settings you should take care about when you make the setting of the HVAC module. The compressor delay will prevent the HVAC Module to turn the compressor ON directly after it Turned off, Delay time of minutes or seconds always preventing

the Direct ON after OFF operation, that will keep your Central unite safe, without damaging your compressors and unites.

To do the AC delay setting

- On the HVAC page go to **HVAC**
- Go to **Delay** section
- Set the **delay for compressor startup**, select (Minutes 1-10) or (seconds 3-127), this setting will prevent the compressor to ON after OFF by this delay Minutes / seconds.

*Compressor startup delay is the most important safety setting to protect your AC unit*

Setting	Value	Unit
Delay for Compressor Startup	3	(S)
Delay for Switching off Compressor	10	(S)
Delay for Fan startup	5	(S)
Delay for Switching off fan	2	(S)

Beside the compressor startup delay there is other function you can set in the Air condition delay section as following

**Delay for switching OFF compressor:** every time you switch your AC unite, the HVAC will give 0-10 seconds delay time to off your compressor.

**Delay for FAN startup:** every time you start your Fan, the HVAC will give 0-10 seconds delay time to start your Fan.

**Delay for switching OFF Fan:** every time you stop your fan, the HVAC will give 0-10 seconds delay time to stop your Fan.

Press **save** when you finish your setting

*it is highly recommended to set your compressor switch off delay to 10 seconds to give more time for the user to change his AC mode between FAN ,Heat, Cool, and make sure he select his mode, that will prevent switching OFF the compressor while the user still selecting his AC mode.*

*it is recommended to give different OFF time for both compressor and FAN, for example if your compressor OFF delay is 10 seconds, make your Fan OFF delay is 8 seconds, this will be better for relay action and power*

consumption by gradually OFF Process.

 In case of power down, when the power restore to the HVAC module, the HVAC will return to its last Running mode.

 Always Read the AC unit instruction and installation manuals before any installation or programming to fit the best requirement for your AC control

## 5-4 HVAC Mode Configuration and safety Running Sequence

In this setting you will configure the HVAC Mode compressor Relays (M1 M2 M3).

Each one can be as (cool, Heat, Auxiliary or disable),

AC Mode			
Switch 1	Function	Cool	
Sequence Run-time(Mins)	1st step (ON)	15	
	2nd step (OFF)	2	
	3rd step (ON)	8	
	4th step (OFF)	2	<input type="button" value="Save"/>
Switch 2	Function	Cool	
Sequence Run-time(Mins)	1st step (ON)	10	
	2nd step (OFF)	5	
	3rd step (ON)	7	
	4th step (OFF)	3	<input type="button" value="Save"/>
Switch 3	Function	Heat	
Sequence Run-time(Mins)	1st step (ON)	15	
	2nd step (OFF)	2	
	3rd step (ON)	8	
	4th step (OFF)	2	<input type="button" value="Save"/>

In the AC Mode configuration you can set the function mode for each relay switch, this module support single stage and multi stage Unites, for example if you have a big unit of 2 cool compressors , then you can set the switch1 and switch 2 as cool.

The table below shows you the setting and function table of your HVAC mode configuration

Setting	Usage of this Function
<b>Function Cool</b>	Used to configure the relay switch that will be connecting to the central AC unit cooling compressor wire
<b>Function Heat</b>	Used to configure the relay switch that will be connecting to the central AC unit Heating compressor wire
<b>Function Auxiliary</b>	Used to configure the relay switch that will be connecting to the Humidifier, dehumidifier, fresh air motor wires, FAN
<b>Function Disable</b>	To Disable the Relay switch , it is used when there is no connection to the relay, and it is important to disable it to save the unnecessary consumption
<b>Sequence Running time 1<sup>st</sup> step ON, 2<sup>nd</sup> step OFF</b>	Used for safety <u>startup sequence</u> to rest the compressor after couple of minutes of starting by 2 <sup>nd</sup> step OFF minutes
<b>Sequence Running time 3<sup>rd</sup> step ON, 4<sup>th</sup> step OFF</b>	Used for safety <u>running sequence</u> to rest the compressor after couple of minutes of running by 4 <sup>th</sup> step OFF minutes especially in case of multi stage compressor to let one rest while the other is starting and vice versa

**Example of double stage cooling unit safety running sequence setting** This setting will let the both compressor to run as startup sequence together for 20 minutes (1<sup>st</sup> , 2<sup>nd</sup> steps) while in the running time (3<sup>rd</sup> , 4<sup>th</sup> steps) , each compressor will (start and stop) in different times to rest and save the Consumption of AC

Cool	Function	<b>Switch 1</b>
<b>20</b>	1 <sup>st</sup> step ON	
<b>0</b>	2 <sup>nd</sup> step OFF	
<b>9</b>	3 <sup>rd</sup> step ON	
<b>3</b>	4 <sup>th</sup> step OFF	<b>Switch 2</b>
Cool	Function	
<b>20</b>	1 <sup>st</sup> step ON	
<b>5</b>	2 <sup>nd</sup> step OFF	
<b>12</b>	3 <sup>rd</sup> step ON	
<b>4</b>	4 <sup>th</sup> step OFF	

*Value 0 Minute will disable the step in the safety sequence settings*

*Safety running sequence is important to keep and extend the life of your Central AC unit.*

*It is recommended for every long running time to set the off step at least to 3 minutes to make the unit rest*

## HVAC VAV Fan Voltage Output Setting 6-5

VAV setting is to set the Variable DC Voltage output for each fan speed from 0-10 VDC or 4-20 mA

- Go to **HVAC** on the AC page
- Go to **VAV fan voltage setting**
- Set the Value of **Voltage** or **Ampir (current)** you want to give in each Fan speed Mode

VAV Fan voltage Settings

Voltage output       Current output

High       (V)

Medium       (V)

Low       (V)

VAV Fan voltage Settings

Voltage output       Current output

High	20	(MA)
Medium	12	(MA)
Low	4	(MA)

Save

 Some VAV unit use 0-5 V, also you can modify your HVAC module VAV voltage setting to adapt with 0-5 V, for example you can set it as (Low 1V, Medium 3V, high 5V).

 You can change between the outputs (**Voltage** or **Current**) from the radio button like the picture above.

## 6- DDP LCD Panel (Basic Lighting and HVAC Function)

In this lesson we will learn about some of the function of the DDP that will cover the Lighting, scenes and HVAC setting.

### 6-1 DDP Overview

The wall **Dynamic Display Panel** DDP is the first LCD panel in the world that can control lights, shade, security, air-condition, music, infrared. With built in temp sensor .

The DDP has ( 4 commands button + 1 button to change between pages) of 4 multi usage pages with AC master page and 8 slave AC pages, music page, password page, and the settings pages.

Each button can be used as single press, keep press, double click, right and left pressing, momentary pressing function

### 6-2 DDP Address Page Password and Language Setting

The DDP panel Address setting can be set by S-bus configuration software, or manually from the DDP panel setting

**To set the Address manually, please do the following:**

- On your DDP panel keep pressing on the **buttons (1 and 4)** together for couple of second
- Setting page will appear for you as you can see

- As you can see from the menu the 4 button function will be (button 1 confirm, button 2 Arrow up, button 3 Arrow down, button 4 back)
- Go to **system** and press button1 confirm
- Another list menu will appear as you see

- You can see the **address** consist of 2 number which refer to the subnet ID, and device ID
- change the address by using button 2,3 for arrow up+ arrow down- , press button 1 to confirm, and to go to the next setting , press button 4 back to exit the setting
- Also in the system list menu you can change the **Backlight** brightness level from 0-10, **IR** receiving function by enabling or disabling it.
- Also you have the **power save** setting , to set the Delay time by seconds to dim the Backlight to the specify Level as you can see on the **Delay** and **LEVEL** setting
- **Page to** setting to let the DDP LCD to show the default page after the delay time finish.
- After you finish your setting you can press button 4 back and exit.

*Changing the Address manually is more convenience and faster for programmer to assign the panels by its address in any new project*

Also you can use the password setting to lock the pages by protected password

**To set the password settings, do the following:**

- On your DDP panel keep pressing on the **buttons (1 and 4)** together for couple of second.
- Setting page will appear for you as you can see.

- Go to **password** by pressing button 3 arrow down then press button 1 confirm
- The password page will appear as following

- In the **PAGE** setting you can select the page number you need to lock by password, then press button 1 confirm
- In the **USED** you can use the arrow up to enable or disable the password page protection then press button 1 confirm

- In the **PASSWORD** you can press button 3 Arrow down to change the password the following menu will appear

- To change the password you should enter your old password and then your new password, the **default password is 0000**
- In the **OLD** type your password by using button 2, 3 to change the number and button 1 confirm to go to the next number digit

- In the **NEW** use the same buttons to type your new password
  - After you finish press button 4 back
- The following page will appear to confirm the password new setting

- Select between YES or NO by pressing button 2,3.
- To **save** the change select yes and press button 1 confirm
- The page that protected by password will be locked after 20 seconds automatically and cannot be open unless you type your right password

**To change the setting menu language, do the following**

- On your DDP panel Keep pressing on the **buttons (1 and 4)** together for couple of second
- Setting page will appear for you as you can see
- Go to Language setting and press button 1
- Chose between the language you have then press confirm button 1

 *The DDP Language setting will affect the default picture showing on the AC page.*

### 7-3 DDP Basic setting

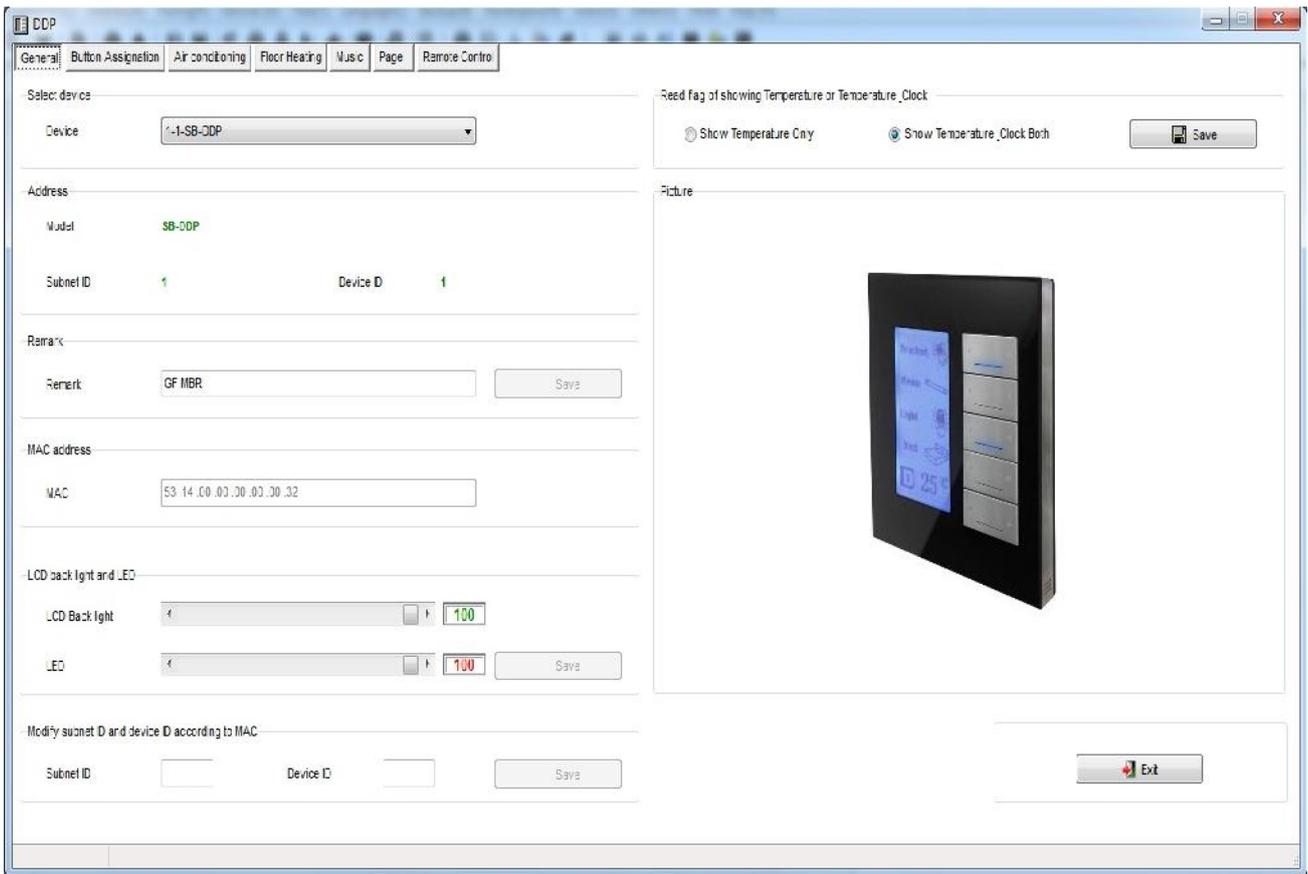

Double click on the Panel on the search List

You can type the Name of the Panel Location in the **Remarks**

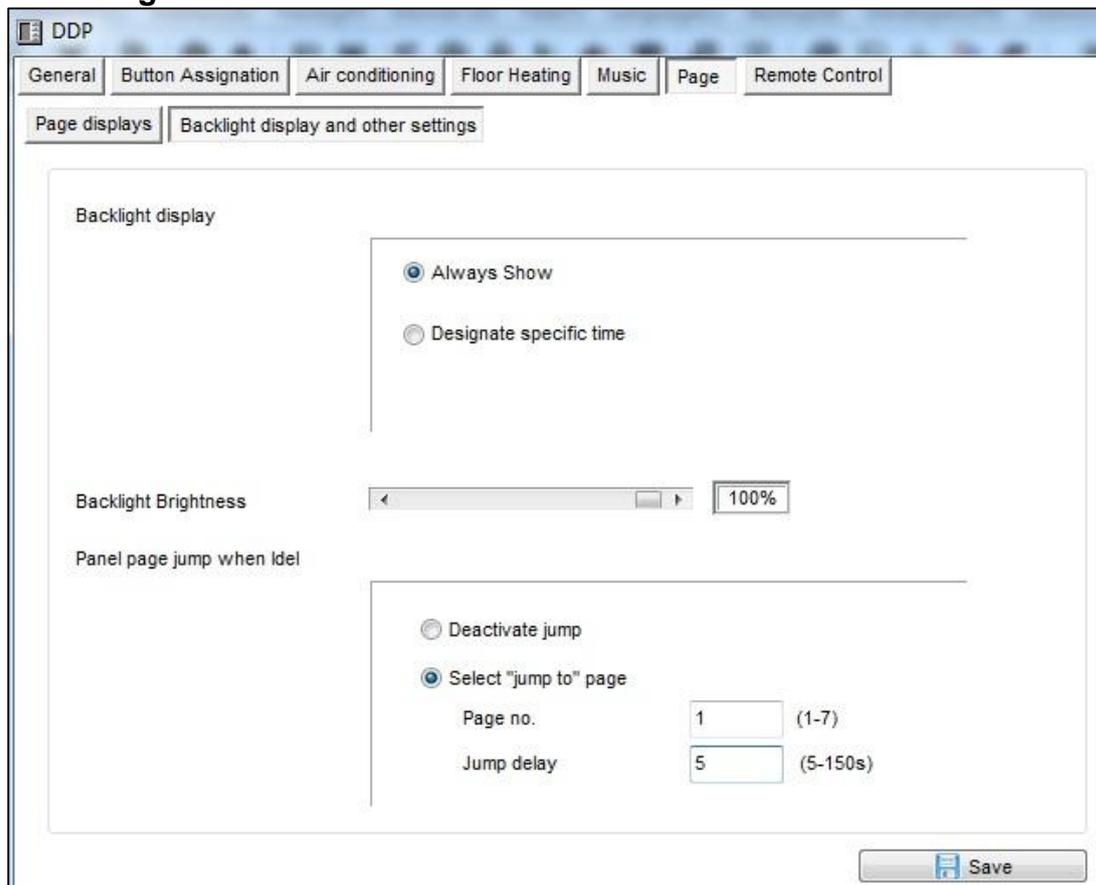

In the **LCD Backlight** you can

- Adjust the Backlight of the LCD from 0-100%
- Adjust the LED status Brightness from 0-100%

Also from General you can Change the subnet and device ID of the Panel

## Go to Pages tab

## Backlight Display and Other Settings

In this page you can make the Backlight Display setting

You have two options

- Always Show: will keep the Backlight ON all the time
- Designate specific time: to put timeout from 10-99 seconds to go to the Save mode of Backlight brightness level

*It is recommended always to set the Backlight to 0% after time in all bed rooms so the Backlight will not disturb the user while he is sleeping*

## Page jump setting

You have two options for this setting

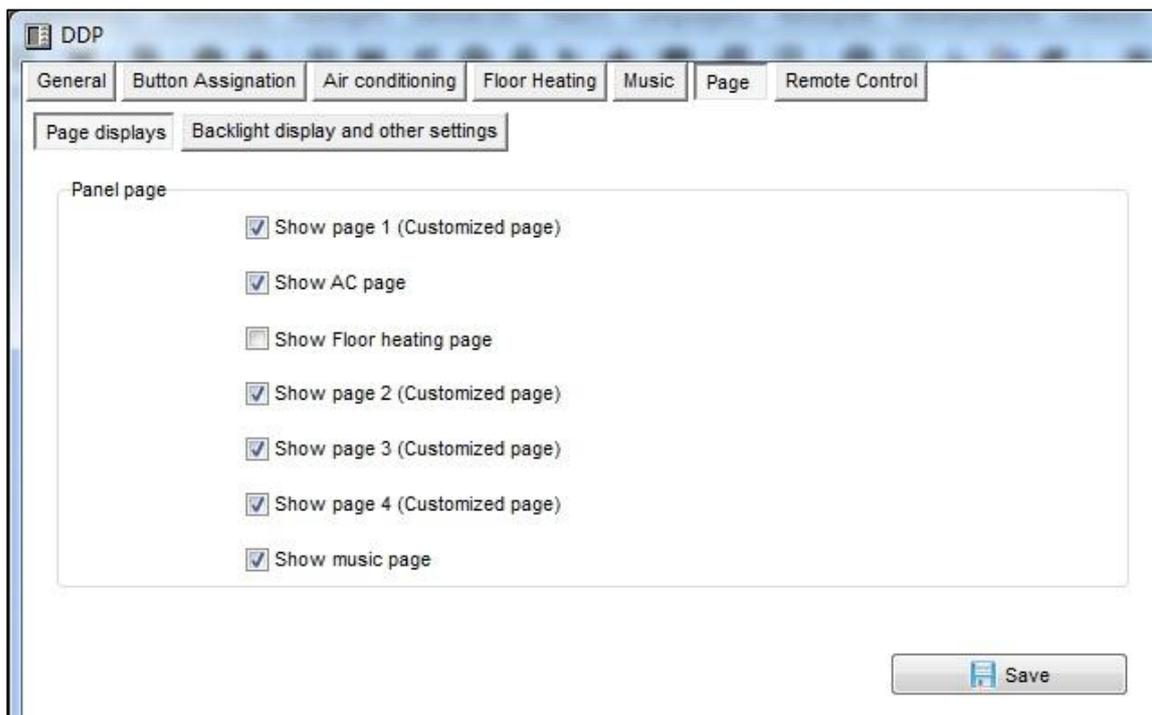

- Never jump: the page will remain and will never change automatically, for example if the user put the DDP panel to page 3 it will remain on page 3 until he change the page by himself
- Designate jump page: the DDP panel will jump to page Number( \*) after Jump delay from 5-150 seconds

*It is recommended always to put the Jumping page to Default lighting page for example page 1, cause the user will use his lighting mostly in his room more than Air-condition or music or other function*

## Page displays

In this tab you can enable or disable showing the page in the panel

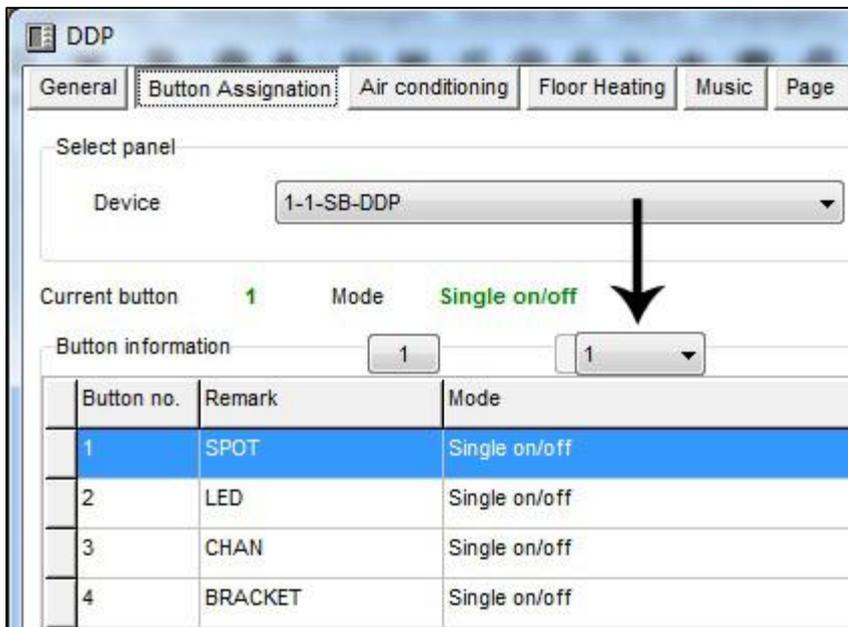

Always disable the page that you don't need in your panel to make your Pages more friendly use and save time to navigate between the needed pages only.

## 7-4 DDP 4 Pages Button Remarks and Modes

Go to **Button Assignment** tab on the DDP Panel setting  
You have total 4 pages in you LCD Panel you can configure it according to your needs, to move between pages use the **Combo box** as shown on this Picture

### Remarks Edit

- Press on **Remarks** Button
- Type your Remarks for each button
- Press **save**
- Go to the next page and do the same for each button

### Mode Edit

- Press on **Mode** button
- Edit your button mode for each button
- Press save
- Repeat it for each page you need to configure its button

**Edit button mode**

**General**

Data acquisition mode:	Device	Model:	SB-DDP
Subnet ID:	1	Device ID:	1
Remark	GF MBR	Button totality	4
Current page:	1		

**Modify Mode synchronously**

Modify button mode

1	Single on/off	2	Single on/off
3	Invalid	4	Single on/off

Single on/off  
 Invalid  
 Single on/off  
 Single on  
 Single off  
 Combination On  
 Combination Off  
 Pressing On/Release Off  
 Combination on/off  
 Separated left/right button for pressing on/releasing off  
 Separated Left/right button for Combination on/off  
 Dbclick and Single On/Off  
 Dbclick and Combination On/Off  
 Separated left/right button(left button is for off, right button is for on)

Save      Exit

<b>Mode</b>	<b>How to use</b>	<b>Where to use example</b>	<b>Function</b>
<b>Invalid</b>	No use	When you have extra button that you don't need to use it	No function
<b>Single OFF</b>	Single Press	In room off mode to close the Light channel	To OFF Light or scene,
<b>Single ON</b>	Single Press	Usually used to trigger scene like visitor, meeting mode etc...	To run scene ON , or Lights on every time
<b>Single ON/OFF</b>	Single Press ON , Single Press OFF,	Widely use for ON/OFF light , scene by single press	The classical use of toggling of
<b>Combination ON</b>	Single Press	to Run complex mode that required more than 1 scene and mode by single press	To trigger up to 99 different commands every time
<b>Combination OFF</b>	Single Press	To OFF complex mode that required more than 1 scene and mode by single press	To OFF up to 99 commands every time the button
<b>Combination ON/OFF</b>	Single Press ON, Single Press OFF	To run ON and OFF complex mode that required more than 1 scene	toggling between ON/OFF up to 99
<b>Separated Single</b>	Press on the Right side ON, Left side OFF	Used to open close curtain, Lights,	To trigger single command ON/OFF
<b>Separated Combination on</b>	Press on the Right side ON 50 commands, Left side OFF other 50	Used to trigger different IR, as CH+,CH- , VOL+ , VOL-, curtain Open close , different IR codes triggering	To trigger 50 commands by pressing Right side, other 50 commands

Double fast click on the right button side to trigger double click function, Single Press ON, Single Press OFF, keep pressing Dim/ keep pressing Ramp	Used as extra function to trigger any other scenes on double click of the same button, like Double click can trigger ALL room off	To use the double click to run up to 49 commands while single press will toggle between ON/OFF of different commands	<b>Double click, single switch</b>
Double fast click on the right button side to trigger double click function, Single Press ON, Single Press OFF	Used as extra function to trigger any other scenes on double click and different one for single Press	To use the double click to run up to 49 commands while single press will toggle between 50 commands ON/OFF	<b>Double click, Combination switch</b>
Keep pressing to keep sending on command, On release the OFF command will trigger	Used for example in Bell, gate motor , some IR commands	To run 1 command as momentary pressing	<b>Momentary</b>
Keep pressing to go to Alarm setting, double click to Active and inactive	Used for reminders for meetings, or get up daily, or medicine reminders	To have clock alarm to run many commands on time	<b>Clock</b>

*It is recommended using separated Mode always to send IR like TV CH +, CH - , or to open close the Curtain.*

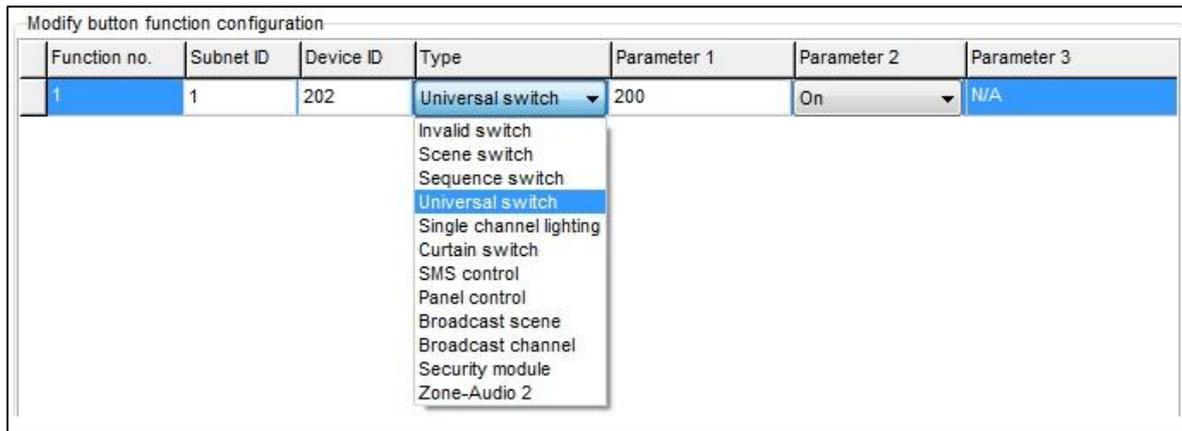

*It is not recommended to use Separated Mode for Lighting Purpose, because the button is small and will confuse the user in darkness and in using; it is recommended to use the Single ON/OFF Mode for Lighting*

## 7-5 DDP buttons function setting

For each button you can make different functions of different commands

- On the panel window go to **button assignation**
- Press on the **Function** button
- Press on type popup menu and you can select the function you want as you can see on the picture

- Press Save and Exit.

**The Button Function of the DDP panel you can make is listed down on this table**

Function type	Parameter 1	Parameter 2	Parameter 3
<b>Invalid</b>	N/A	N/A	N/A
<b>Scene</b>	Area	Scene Number	N/A
<b>Sequence</b>	Area	Sequence Number	N/A
<b>Universal</b>	Switch	ON / OFF	N/A
<b>Single channel</b>	Channel Number	Brightness 0-100%	Fade time 0S - 60 M
<b>Curtain</b>	Switch	Stop / ON/ OFF	N/A
<b>GPRS</b>	Message	Message SMS Number	N/A
<b>Panel</b>	IR Function	ON / OFF	N/A
<b>Panel control</b>	Lock key of	ON / OFF	N/A
<b>Panel</b>	AC Power	ON / OFF	N/A
<b>Panel</b>	Cooling	0-30 C , 32- 86F	N/A
<b>Panel</b>	FAN Speed	Auto/high/med/slow	N/A
<b>Panel</b>	AC Mode	Auto/Cooling/Heating/FAN	N/A
<b>Panel</b>	Heating	0-30 C , 32- 86F	N/A
<b>Panel</b>	Auto temp	0-30 C , 32- 86F	N/A
<b>Panel</b>	Rise temp	1-5 C/F	N/A
<b>Panel</b>	decrease	1-5 C/F	N/A
<b>Panel</b>	LCD Backlit	ON / OFF	N/A
<b>Panel</b>	Lock key of	ON/OFF	N/A
<b>Broadcast</b>	All Area	Scene Number	N/A
<b>Broadcast Channel</b>	ALL Channel	Brightness 0-100%	Fade time 0S - 60 M
<b>Security</b>	Area	Arming Mode	N/A

Each Function type is necessary for different Action

**Example of each one as the table below**

<b>Example of using</b>	<b>Function Type</b>
Is to disable the function	Invalid
Used to trigger the Scene that you create on the Dimmer or Relay Area	Scene Switch
Used To trigger the Sequence that you create on the Dimmer or relay Area	Sequence Switch
Used to send infrared code number, play show control list , set logic flag On or Off, set the hotel door bell services , disable or enable (Motion sensor, light intensity, zone port automation )	Universal Switch
Used to turn one channel lights on./off with special level and running fade time	Single channel Lights
Used to open, close or stop the curtain channel	Curtain Switch
Used to send SMS as alert, Help, Emergency , or information	GPRS Control
Used to turn the Air condition , ON/OFF	Panel control , AC Power
Used to set the Air condition cooling desired temperature to 0-30 C , 32- 86F	Panel control Cooling Temp
Used to set the Fan type between Auto, High , Medium , Low	Panel control FAN Speed
Used to set the AC mode to run as Auto, Cooling, Heating , Fan only	Panel control AC Mode
Used to set the Air condition heating desired temperature to 0-30 C , 32- 86F	Panel control Heating Temp
Used to set the Air condition Auto mode desired temperature to 0-30 C , 32- 86F	Panel control Auto temp
Used to Rise the Temperature by 1-5 C	Panel control Rise temp
Used to Lower the Temperature by 1-5 C	Panel control Decrease Temp
Used to set the Backlightof LCD ON / OFF	Panel control LCD Backlit
Used to Hold your AC, so no one can control it, or to lock other room AC. Like children room AC	Lock key of AC
Used to trigger same scene number for all the Areas of the dimmer or relay	Broadcast scene
Used to turn ON/OFF or set channel to brightness level for the all channel of Dimmer or relay	Broadcast Channel
Use to Arm your home in deferent level, like Vacation Away Night, or Disarm, also used to trigger panic , Fire, Emergency	Security Module

## 6-6 DDP Buttons Memory, Dimming, and LED Setting

Beside the Button mode and function there are three important setting for each button

We can categorize it as:

- **Save/Don't save:** the **Save** will save the last Dimming value, every time you switch ON the light channel it will go to the last lights brightness Level you set before switching it OFF, while the **Don't save** will turn the lights brightness to the maximum level and not save the last statuses.
- **Dimming / not Dimming setting:** it is simple setting you can use **Enabled** when your target light is dimmable, while using **Disabled** when your target is not Dimmable Lights.
- **LED enable / Disable Setting,** you can enable your 2 way Button LED Statuses, while in some situation you need always to disable the button LED.

### How to make LED, Dimming, Memory/toggling setting

- Go to **Button assignation** tab on the panel setting
- Press on **Dimming and LED**
- Select the setting for each button you need

Dimming and LED Status

General

Model: SB-DDP  
 Subnet ID: 1 Device ID: 1  
 Remark: GF MBR Current page: 1

Dimming and LED Status

Single channel Multi-channel

Button no.	Dimming	Dimming value	LED Status
1	Enabled	Save	Enabled
2	Disabled	Don't Save	Disabled
3	Enabled	Don't Save	Enabled
4	Enabled	Don't Save	Enabled

Save Exit

 **Always make the button diming setting Invalid if you control ON/OFF Relay channel, so the user will not confuse in dimming it without any response from the Channel.**

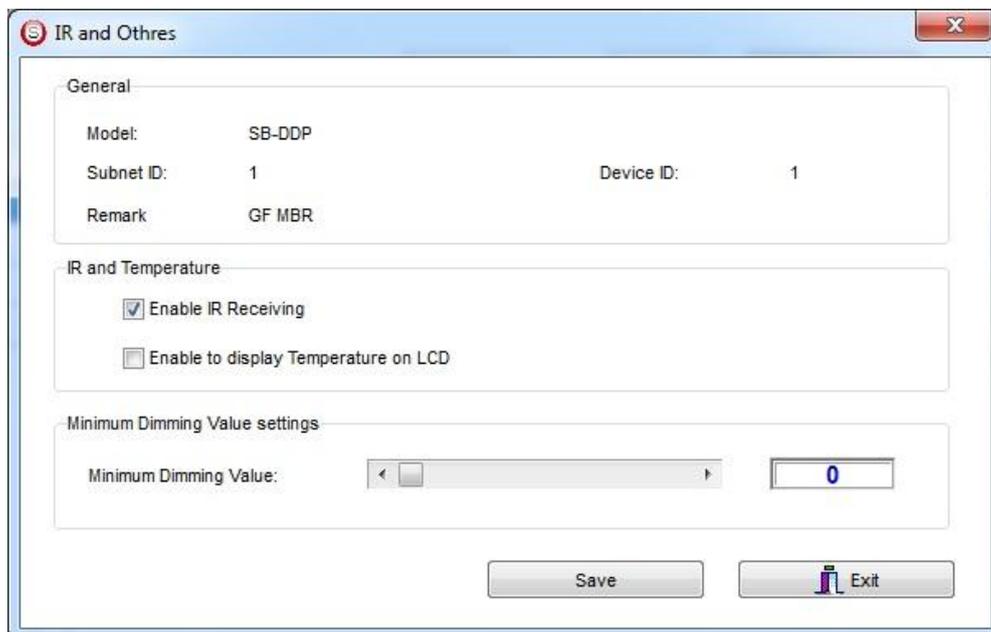

## 6-7 DDP Setup (Minimum Diming Value and Infrared)

**Minimum Dimming value:** is used to force the panel not to dim the light from the button by keep pressing it in order not to go below the minimum level of dimming

**Infrared function:** is used to enable or disable the IR receiving function on the panel,

To make the setting of the of the Minimum Level and IR setting

- Go to **Button Assignation** tab
- Press **IR AND OTHERS** button
- Adjust the Minimum Dimming Value from 0% - 50%
- Uncheck the **Infrared receiving** function to disable or check the box to enable it
- Uncheck the **Display Temp on LCD** function to disable or check the box to enable it

 *be careful when you make the Dimming function valid and Memory, sometimes the user will keep pressing on the button to dim the light to 7% Level and then he will turn it off and on by single press and the Light will change from 0% to 7%, then the user will think the lights is not working. To solve this problem use the minimum dimming value to prevent the user to dim less than the minimum dim level.*

 *It is recommended always to set the minimum Dim level for all panels that control the Dimmers to 20% - 30%. .*

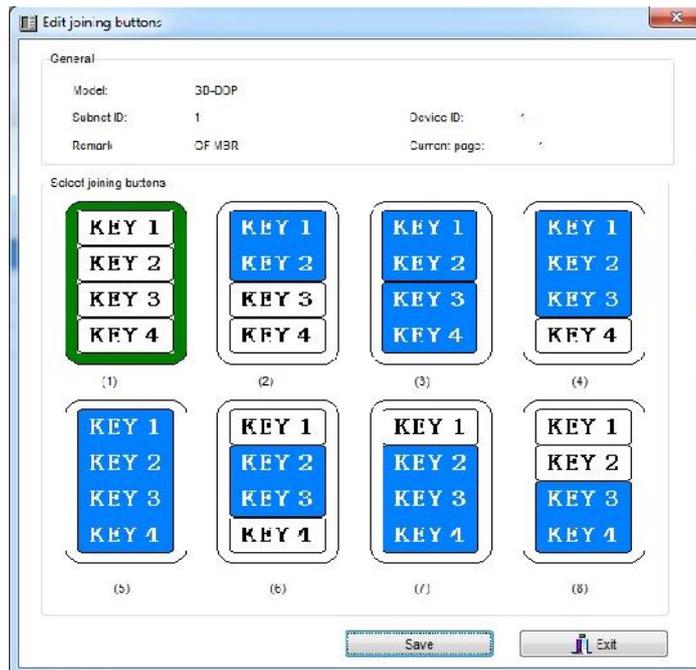

## 7-8 DDP Combination Way

DDP Combination way is very useful for giant people whom have big Fingers, and old people who can't see the small buttons

You can combine two buttons or more to make it as one button

To make the combination in the Button Assigantiontab

- Press on **Joining** button
- Select the way you want to combine your button
- Press **save**.

## 6-9 DDP Button Picture Edit and Download

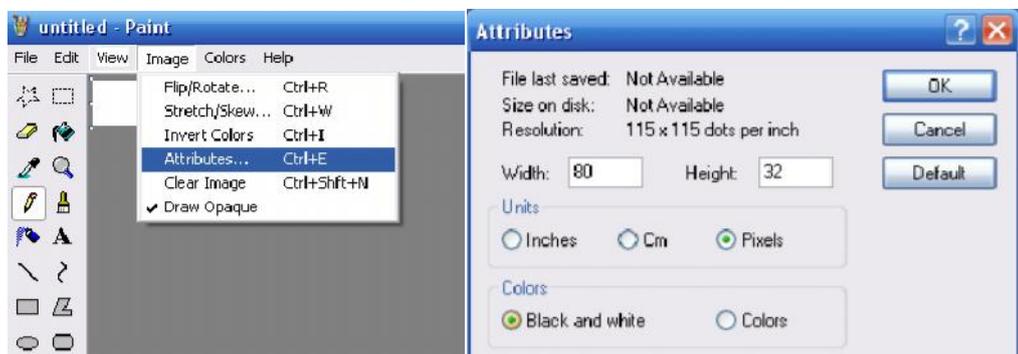

You can download bmp Format Picture for each button for both normal Statuses and ON statuses

To download the Picture

- In the Button Assignment tab select the page you want to download the picture to it from 1-4
- Press on **Pic downloads** button
- Select **Normal Statuses or On Statuses** for the Picture you want to download.
- **Double click** on the white square
- Brows where the Picture file you need to download then press **open**
- Press **download button** for this picture or you can select all the picture you need in this page then press **Download all in the current statuses** button
- You can see the download bar running from 0-100%.

**!** *You have to be careful for the size of the picture that is written near each button for example, Size W= 80, H= 32 , you can see deferent size you have depend on the combination way*

**!** *All pictures should be black and white setting and bmp format, to do that in simple way go to windows paint program and set the Image/Attribute and set the Pixels size and the black and white setting then save your picture as bmp.*

## 6-10 DDP Mutual Exclusion Function

### Mutual Exclusion Function

This function is used on switch panel to link between two or more combination ON/OFF button mode to consider them as 1 group, and to prevent the confusion of using 2 related macros scenes together.

- On the **Button Assignment** press on the **mode linking** button
- Set the value to **YES** for all the buttons of combination mode, or double click mode to be as 1 group together

General

Model: SB-DDP  
Subnet ID: 1 Device ID: 1  
Remark: GF MBR Current page: 1

Condition:

The button mode must be the following:  
Combination On  
Combination off  
Combination On/Off  
Dblclick and Combination On/Off

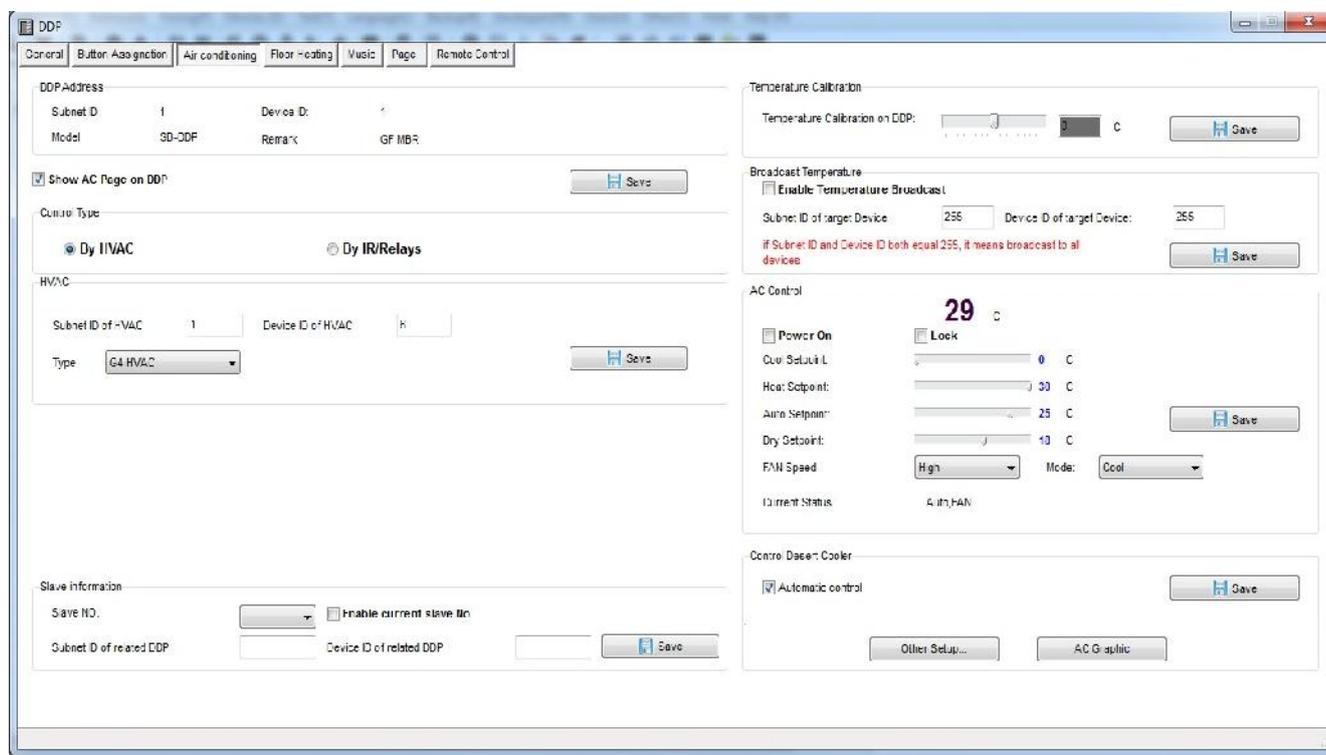

Edit mode linking

Button no.	Remark	Mode	Enable mode linking
1	curtain	Single on/off	N/A
2	LED	Single on/off	N/A
3	CHAN	Single on/off	N/A
4	BRACKET	Single on/off	N/A

Save Exit

## 6-11 DDP Air condition Basic Setting and testing

Go to Air condition tab, you can in this page enable or disable the AC function of the LCD DDP panel, and make all the other AC setting

In the **basic information** of Air condition edit the Subnet and device ID for the HVAC Module that related to the panel room then press **save**

For Example if your HVAC Module address is subnet 1 , device ID 113 then type that in the Air condition panel setting and save

Also you must enable the DDP to control the normal HVAC module by activate the **Automatic Control**

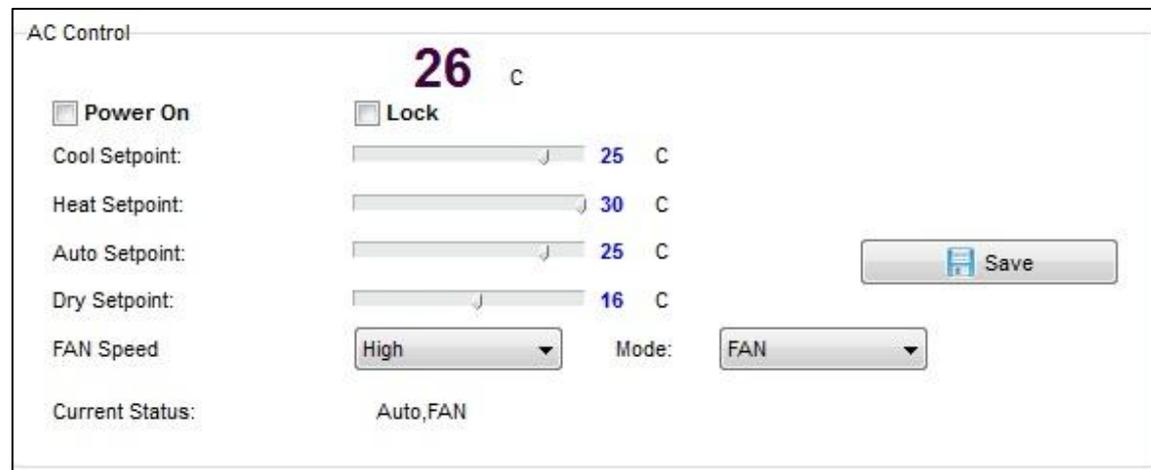

Control Desert Cooler

Automatic control

Save

Also you can test your AC control in the **Ac control** section

AC Control

26 C

Power On       Lock

Cool Setpoint: 25 C

Heat Setpoint: 30 C

Auto Setpoint: 25 C

Dry Setpoint: 16 C

FAN Speed: High      Mode: FAN

Current Status: Auto,FAN

Save

## 6-12 DDP AC Page control Setup

On the Air condition tab press **other Setup** button

In the temperature Type you can change the function and display settings

**Temperature Type:** can be (C) Celsius or (F) Fahrenheit

**AC control information:** you can enable or disable the options of Fan speed

The screenshot shows a window titled "Air-condition collocation information" with four tabs: "Temperature model", "Time type", "Temp Range", and "Sensor Model Settings". The "Temperature model" tab is active. It contains three main sections:

- Temperature type:** A dropdown menu is set to "C" (Celsius). A "Save" button is to the right.
- Air-condition Control information:** This section has two columns of checkboxes. The first column is labeled "FAN speed" and includes "Auto", "Medium", and "Low". The second column includes "High" and "Low". Below these are checkboxes for "Mode": "Cool", "Heat", "FAN", "Auto", and "Dehumadifair". A "Save" button is at the bottom right.
- Set Power-Saving:** This section has a "Fan switch off compress" checkbox. Below it are radio buttons for "Power-saving" (selected) and "Power-nosaving". There is also a "Windsweeper" checkbox. A "Save" button is at the bottom right.

Like **High low Medium**, and Mode type like **cooling, fan, heating**, and **Auto**, to disable it to appear as option on the DDP panel

**Power saving:** if enable then the Fan will stop with the compressor when the room temperature become equal or below the desired temperature when FAN mode on Auto.

**Time type** you can set your time display format.

**Temperature range** you can set your higher and lower set point for each mode (cool, heat, Auto) so the user can not go above the higher limit, or below the lower limit.

*It is recommended always to set the Limit for Cooling, heating and auto, so the user will not make the desired to freezing or very hot level for each mode and to prevent children to do so.*

**Sensor Model setting:** to refer to the Indoor temp sensor (DDP temp sensor), Outside sensor (Pro HVAC temp sensor). Or Average between both sensors

### 6-13 DDP Temp Calibration and Lock function

You can Calibrate your DDP temp sensor to give you exact room temperature, for example: sometimes the DDP installed in place where the sun striking it or near heat or cold source, or if the temperature near the wall is not as the temp in the room, then you have to adjust the temp sensor level to be as the reasonable room temperature where the people set or sleep

To do that

- Go to **Air-condition tab** then go to **temperature calibration** section, you can adjust it (-8 to +8 degree).
- Press **save**

Another function is to lock the AC page, you need this function in public area that no need for user to play with Air-condition and the whole control will be centralized from the Automation controller

- Go to **AC control** section, and enable the **Lock** or disable it
- Press **save**

AC Control

26 °C

Power On
 Lock

## 6-14 DDP Slave to other DDP AC setting

One of the unique functions of the DDP is that can control up to 8 other AC Of other panel.

To set the AC Panel slave on the Air condition tab

- go to **slave information** section
- Select **Slave NO** from 1-8
- Type the slave DDP **Subnet** , and **Device ID** no
- check **Enable**
- Press **save**
- Do the same steps for the other slaves up to 8

Slave information

Slave NO.

Subnet ID of related DDP

Enable current slave No

Device ID of related DDP

*To navigate between slaves AC, on the DDP panel when you are in the AC Page5, go back by Arrow back then you will see the slave AC, press Arrow back again to see more slave AC*

## 6-15 DDP Broadcast Function

This function is important to update the others Devices in the network about the current room temperature

It is useful for Automation and BMS system

Setting broadcast temp to subnet 255, device ID 255 will update all the devices in the Network

Broadcast Temperature

Enable Temperature Broadcast

Subnet ID of target Device:  Device ID of target Device:

*if Subnet ID and Device ID both equal 255, it means broadcast to all devices*

## 6-16 DDP AC Graphic setting

In the AC Graphic you can put new Icon for cooling, Heating, Fan, also you can change the English text to any language by downloading bmp file, and to put Room names Picture for all the 8 slaves AC

- Press on the **AC Graphic** button
- In the Content tab you can keep your icon as a default or change it by set up option
- Select the **photo type** and press on the picture
- Brows and open the bmp picture you want picture should be 48 \*32 pixel size
- Press **send photo** button to download the picture
- Press **save statuses**

Air-condition Photo information

Content Slave Picture

Content

Default

Set up

Photo type

48 x 32 48 x

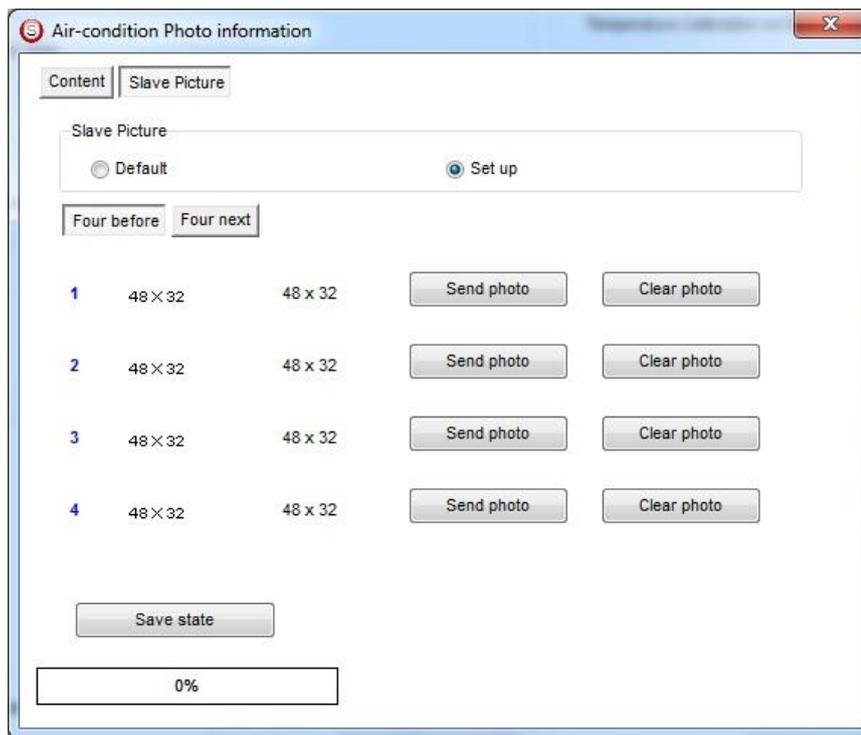

File name 0

Auto FAN Speed  
High  
Medium  
Low  
Cooling  
Heating  
FAN  
Auto Mode

0%

Also you can put picture for the room for the 1-8 AC slave control

- Go to slave Picture
- Select set up
- Select the tab of 1-4 slave and the other tab for 5-8 rooms picture
- Brows the picture and press on send photo picture to upload it.
- Press **save states**

## 6-17 DDP Infrared Function overviews.

Also you can use the AC Page to send different Infrared command to control your split AC, or any new models of dry contact

Control Type

By HVAC  By IR/Relays

Control AC by IR

Infrared Control

	NO.	Subr		Parameter 1	Parameter 2	Parameter 3
			Cooling temperature			
			FAN speed			
			Cooling,Heating			
			On/off			
			Heating temperature			
			Auto Temperature			
			Dry Temperature			
			Wind Swept			

## 7- Z-audio 2 (Music system) :

### 7-1 Z-Audio Overview:

Distributed Audio Zone Player and Amplifier. Can Deliver up to RMS 48 Watts of Stereo. With Balanced Out to connect to Pre-Amplifier Booster. With Built in FM Radio Tuner, Built in SD Card Reader slot. Can Stream Digital Audio through LAN/FTP from any PC or NAS on the Network. Advanced PA Port that can detect Audio Announcement Automatically mute current playing source, then switch back to the same music source again once announcement is completed. Additional RCA Stereo Input from Direct Local Source Feed to allow local Music ports to connect direct from TV, DVD, IPod Dock or any other Source.

### 7-2 Z-audio basic setting:

Z-Audio2 is an IP based and also is smart-bus G4 enabled, thus you can connect 1470 devices.

In General tab you can notice "network parameter " section which you can change the Z-audio IP.

Network parameter

IP: 192.168.10.252 Port: 6000

Route IP: 192.168.10.1

IP MAC: S B C 255 255 255

Save

- In Z-Audio you will see "SD-CARD" tab where you can modify your SD-cards Files

 When you put the SD-cards for first time the Z-audio Automatically will create empty folder called "Special " DO NOT delete this folder.

Zone-Audio 2

General | SD Card | Source and Radio | Language synthesis | FTP

Select Device

Device: 1-200-SB-ZAudio2-DN

Playlists content: RIHNNNA 5(Songs) 43.4MB(45,517,306 bytes)

Index	Song Name

- In " Source and Radio " tab you can enable or disable what kind of source do you want to show it on **DDP**

1. SD-card
2. Audio In
3. PA in
4. Radio
5. FTP

In FTP tab you can activate the FTP server by putting the FTP setting (user name, password, Server IP).

## 7-3 How to control from DDP:

To make pairing between Z-audio and DDP there are three ways :

### 1- By software :

- Double Click on DDP on smart cloud software
- Go to " Music" tab
- Put the the Device ID and sub net ID for the Z-audio
- Click save

### 2- By DDP :

- Go to music page on DDP.
- Press the first button and keep pressing for 3 sec.
- Choose "Zone".
- Put the device ID and subnet ID.
- Press exit button to save (button No 4).

### 3- By manual programming (pairing):

- On the Z-audio keep pressing Broadcast Button For 7 sec (till the Blue light is blinking)
- Go to music page on DDP , one click first button one click
- Wait for max 15 sec , Now the pairing is done.

## 8- 9in 1 Sensor PIR Programming

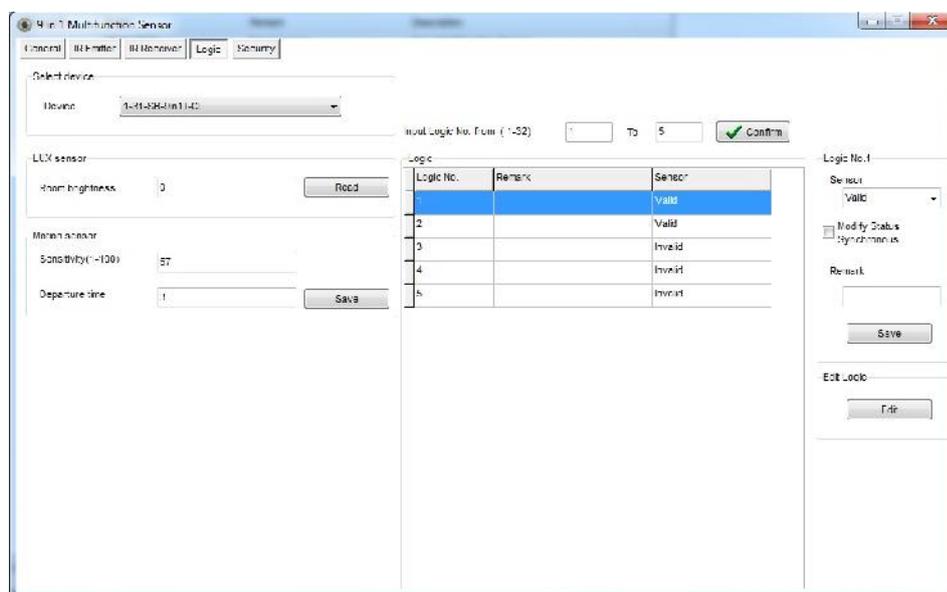

### 8-1 S-BUS 9 in 1 sensor Overview

Smart bus have perfect sensor for ceiling and wall type, this sensor is used multi function one of them for trigger the lights on automatically and to turn the lights off if no movement for desired minutes for saving energy

### 8-2 PIR 9 in 1 sensor Basic setting

Double click on the 9 in 1 sensor on the List

- Go to "Logic" tab.

- You will find on the left side the "Lux" sensor section which is measure the brightness for the area.

To read the current value just press "**Read**" button.

- You will find also "Motion" Sensor section , here you can change the **sensitivity** for the sensor and the **Departure** time which is the time you to switch off the Light of sensing .

LUX sensor

Room brightness

---

Motion sensor

Sensitivity(1-100)

Departure time

In the middle you have the events list:

Input Logic No. from ( 1-32)  To

Logic No.	Remark	Sensor
1	movement	Valid
2	no movement	Valid
3		Invalid
4		Invalid
5		Invalid

Logic No. 1

Sensor

Modify Status Synchronous

Remark

Edit Logic

For example logic No.1 for " **movement** " event that mean when is there any movement the "X" of commands will execute.

 " **Movement** " it's just a name , you can put any remark you want from "remark" field .

 You can create up to 32 events .

In the previous picture we create two events **movement** , **no movement**

 To create any event must **valid** it from the same window in sensor section, then remark it, if you don't want this event any more you can easily **invalid** it .

- To Edit the event press **Edit** button from edit logic section

All what you see now just for event No.1, double click on Event 2 from the events list then you will see deferent window.

This window it's divided for two section **status** and **Edit** section.

In **status** section you can check:

- Two dry contact status (built in **9in1**).
- Two external conditions status (for more info check **12- Logic Module**).
- Motion sensor status.
- Room brightness value.

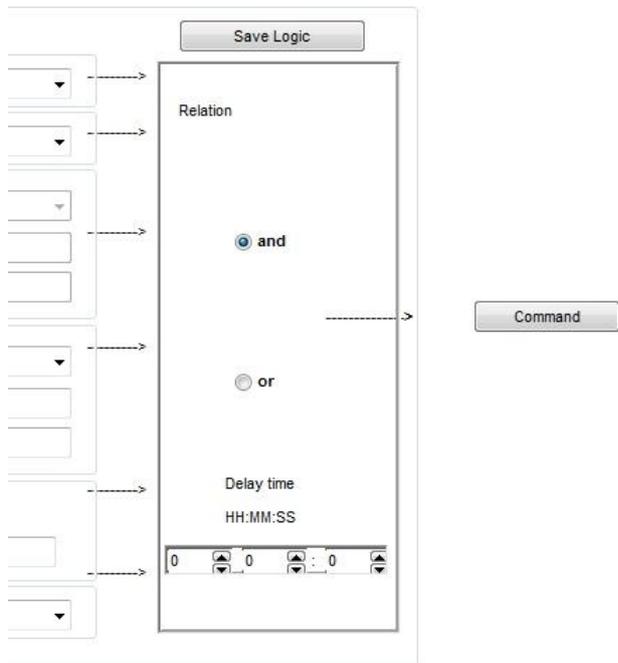

In **Edit** section you can configure:

- Two dry contact.
- Two external conditions.
- LUX sensor (Brightness sensor).
- motion sensor.

**Edit status**

Condition	Condition content
<input checked="" type="checkbox"/> Dry contact 1	Connect
<input checked="" type="checkbox"/> Dry contact 2	Disconnect
<input type="checkbox"/> External condition 1	
	Switch No. 1
	Remark Tv On
<input checked="" type="checkbox"/> External condition 2	ON
	Switch No. 1
	Remark Tv On
<input checked="" type="checkbox"/> LUX sensor	Brightness Level(0-5000)
	From 1 To 100
<input checked="" type="checkbox"/> Motion sensor	Movement

Also you will notice the **Relation** block, this is very important block:

Here you choose how many condition you want at the same time.

Example : If I put the conditions in the **Edit status** section like the following :

The screenshot shows the 'Edit status' configuration window. On the left, there are six condition rows. The first two are 'Dry contact 1' (Connect) and 'Dry contact 2' (Disconnect). The third is 'External condition 1' with an empty dropdown. The fourth is 'External condition 2' (ON) with 'Switch No.' set to 1 and 'Remark' 'Tv On'. The fifth is 'LUX sensor' with 'Brightness Level(0-5000)' and 'From' 1 'To' 100. The sixth is 'Motion sensor' (Movement). On the right, the 'Relation' section has 'and' selected. Below it, 'Delay time' is set to '00:00:00'. A 'Command' button is on the far right. Arrows indicate connections from the 'LUX sensor' and 'Motion sensor' conditions to the logic configuration area.

**THAT** mean : if the brightness in the room between **1 and 100**

**AND**

If there is **movement**

Then execute whatever you put in **command** button after **zero** delay time

 **Movement** here not remarks its fixed indicating if there is movement or not

**EX2:** what if I want to turn on light if there is **movement** and turn it off if **no movement** after 20 min ?

- A- We have to create two events with any remark ,one for movement and one for no movement.
  - For movement event we have to put check just on **motion sensor** and choose **movement**.

Motion sensor
 
 Movement
 ▼

- Press **Command** button and put your Light address

Modify commands

Command NO	Subnet ID	Device ID	Type	Parameter 1	Parameter 2	Parameter 3
0	1	50	Single channel lighting	1(Channel no.)	100(Intensity %)	0:0(Running time(mm:ss))

- B- In the event No. 2 we have to assign it to switch off the light if there is no movement after 20 min.

Put check the motion sensor and choose **no movement** and in delay time put 20 on min field .

<input type="checkbox"/> LUX sensor	Brightness Level(0-5000) From <input type="text" value="1"/> To <input type="text" value="100"/>	Delay time HH:MM:SS <input type="text" value="0"/> : <input type="text" value="20"/> : <input type="text" value="0"/>
<input checked="" type="checkbox"/> Motion sensor	No movement <span style="float: right;">▼</span>	

## 8-4 Learning and send IR codes :

The screenshot shows the '9 in 1 Multifunction Sensor' software interface. It has tabs for General, IR Emitter, IR Receiver, Logic, and Security. The 'IR Emitter' tab is active. The 'Device' dropdown is set to '1-31-SB-9in1T-CL'. Below this, there are input fields for 'Please input IR No. from ( 1-249)' with '1' and '5' entered, and a 'Read' button. A table titled 'IR information' lists 5 IR codes:

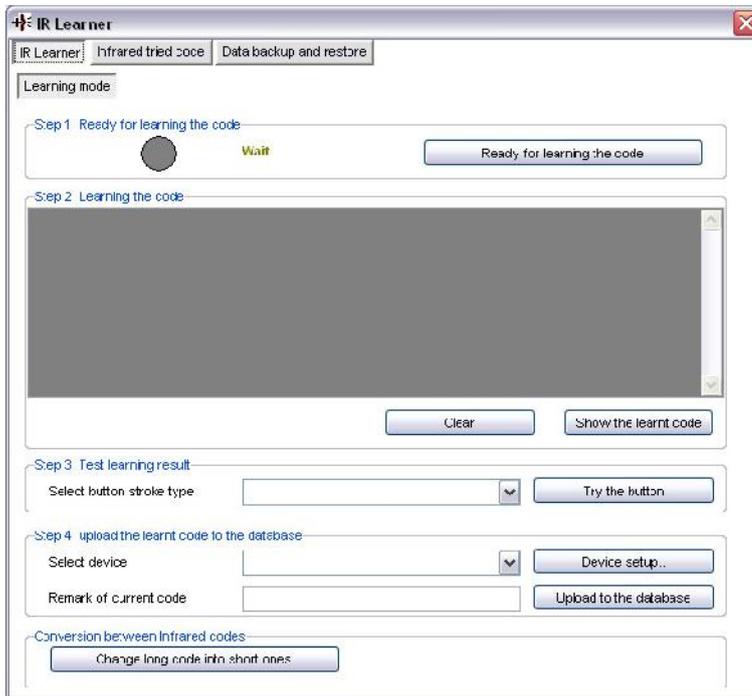

IR number	Remark	Status
1	Tv On	Enabled
2	CH+	Enabled
3	CH-	Enabled
4		Enabled
5		Enabled

Other sections include 'Current IR Information' (IR No: 1, Total QTY for enabled IR: 5, Total QTY for disabled IR: 0), a 'Delete All IR' button, a 'Download code to current IR No' section with device and code dropdowns, 'Learn IR...' and 'Download Now' buttons, a 'Test IR Code you have downloaded' section with radio buttons for 'Once', 'Hold on button', and 'Continuously hold on button', 'Send IR Now' and 'Stop' buttons, and a 'Current status' field showing 'Standby'.

If you want to control any devices has a remote you need first to save its IR codes, For that, connect your IR Learner install the driver (WIN XP):

- Press **Leran IR** button you will get this window :

- Click on **Ready for Learning** button the grey circle it will be green :

- Put your Remote in front of IR learner and press the desire button you want to its code.
- Once you press you will get the success notification :

- Now Select single press then go to Device setup

Step 3 Test learning result

Select button stroke type

---

Step 4 upload the learnt code to the database

Select device

Remark of current code

- Create new device with remark then click on add :

**Device setup**

ID	Remark
1	Smart IR Remote(Big)
2	AUX AC

Add device

Remark

Edit device

ID:

Remark

- Click Exit
- after you create your devise you can choose it from **select device** (I choose T.V remote)
- Remark your code to recognize it later Ex : **CH+**
- Click **upload to data base** button.

Step 4 upload the learnt code to the database

Select device

Remark of current code

- High light on any row in **IR Information** table (I chose No.1)
- Go to **Download code** section choose your device and code
- Click **download now**.

Please input IR No. from ( 1-249)  To

IR number	Remark	Status
1	TV REMOTE_CH+	Enabled
2	CH+	Enabled
3	CH-	Enabled
4		Enabled
5		Enabled

Download code to current IR No-

Select device:

Select code:

-) to send this code through **DDP** just choose any button :

Function no.	Subnet ID	Device ID	Type	Parameter 1	Parameter 2	Parameter 3
1	1	31	Universal switch	1	On	N/A

Device ID= 31 → you 9 in 1 ID  
 Type = Universal → must be to send IR code  
 Parameter 1 = 1 → where we save first code (CH+)  
 Parameter 2 = on → to execute the command

## 9- Rs 232/485 Module:

### 9-1 RS232/485 overview:

PC/IP Interface and 3rd Party Integration RS-232 & RS-485. This Module is multi Purpose, it can be used for programming S.BUS, and a bridge between computer Smart-BUS networks, can also be used as Network Bridge in the big projects with thousands of devices. It is the Touch Screen to SBUS Bridge. Same device is used for 3rd Party Integration. Can send more than 1980 ASCII and/or Hexadecimal Command with **50** ASCII Character Message Length for more flexibility. 2 way communication that can receive up to **99** ASCII, HEX string commands to do up to **20** different commands for each message received Fixed ASCII S-BUS Protocol with Send Command Delay option Adjustable baud rate.

Accordingly you can change the RS 232/485:

Network parameter

IP:	<input type="text" value="192.168.10.250"/>	Port:	<input type="text" value="6000"/>			
Route IP:	<input type="text" value="192.168.10.1"/>					
IP MAC:	<input type="text" value="128"/>	<input type="text" value="71"/>	<input type="text" value="255"/>	<input type="text" value="85"/>	<input type="text" value="85"/>	<input type="text" value="85"/>

### 9 -2 Rs 232 /485 to S-bus:

This tab is very important if you want to receive an external signal from any third party And convert this signal to S-bus Commands.

Control | RS232 to S-BUS | S-BUS to RS232 | RS485 to S-BUS | S-BUS to RS485

Select device: MFR-RSIP-01

RS232 command No: 1 Control mode: ASCII

Corresponding S-BUS commands of current RS232 command

Command	Secret ID	Device ID	Type	Parameter 1	Parameter 2	Parameter 3
1	100	2	Broadcast channel	All channels	100(Intensity %)	0.0(Running time)

RS232 Edit: Remark, RS232..., S-BUS Edit: S-BUS Command, Exit

Ex : we have RF ID system fixed at the gate and we want to open the motor gate when

the system detect the RF card ?

Note: **RF CARD ID** : 00002324

- After you connect the RS232 wires Double click on RS IP
- Go to “ RS232 to S-BUS”
- Click “RS232” button
- In “character string “ of the new window put your RF card in **ASCII** or **HEX**
- Press “save”
- Exit
- Click on **S-Bus Command** button
- Like any s-BUS command put your relay address and channel No. which you already connect your motor cable.

Modify Commands						
Command NO	Subnet ID	Device ID	Type	Parameter 1	Parameter 2	Parameter 3
1	1	80	Single channel lighting ( 1(Channel no.)	100(Intensity %)	0:0(Running time(mm:ss))	

### 9-3 S-BUS to Rs232:

In RSIP you will notice also “S-bus to Rs232”, this tab if you want to send S-bus command to the external system( Ex: Nuvo ) through RS232.

The screenshot shows the 'Hybrid Integration Link with IP' software interface. The 'S-BUS to RS232' tab is selected. The interface includes a 'Current S-bus command' field with the value '1' and a 'Current target number' field with the value '1'. Below these are two tables:

**S-BUS Commands:**

Command no. from (1-99)	To	Confirm
1	5	Confirm

**Current RS232 commands of June 4 S-BUS command:**

Target no. from	To	Confirm
1	2	Confirm

The main table below has the following data:

Command	Time	Input form	Character string
1	100ms	ASCII	111
2	Invalid	ASCII	

On the right side, there are buttons for 'S-BUS Edit' (with 'Refresh' and 'S-BUS Command...' sub-buttons) and 'RS232 Edit' (with 'RS232 Command...' sub-button).

#### To do that :

- Click **S-BUS Command** Button
- In “type” option choose “universal switch”
- Create your command address in Parameter 1 (1~255)
- Parameter 2 Choose “ON” to execute the RS232 command when this FLAG is ON

S-BUS Commands

Command no. from(1-99)  To

Command	Remark	Type	Parameter1	Parameter2
1		Universal switch	1(Switch no.)	On(Switch Stat
2		Universal switch	2(Switch no.)	On(Switch Stat
3		Invalid switch	255	255
4		Invalid switch	255	255
5		Invalid switch	255	255

- click **RS232 Command** button
- put your RS232 command In ASCII or HEX
- save,exit

Corresponding RS232 commands of current S-BUS command

Command NO	The first character	Input form	Character string	Ending Symbol
1	100ms	ASCII	open light	<CR>
2	Invalid	ASCII		NONE

- **To call this command from DDP :**

- Double click on DDP
- Go to button assignation
- In the mode its recommended to select “single on” or “combination on”
- In s-bus command list put your RSIP ID and Subnet
- Type “ universal “
- Parameter 1 “ 1” the rs232 command address (1~255)

S-BUS Commands

Command no. from(1-99)  To

Command	Remark	Type	Parameter1	Parameter2	Parameter 2	Parameter 3
1		Universal switch	1(Switch no.)	On(Switch Stat	Parameter 2	Parameter 3
2		Universal switch	2(Switch no.)	On(Switch Stat	Parameter 2	Parameter 3
3		Invalid switch	255	255	Parameter 2	Parameter 3
4		Invalid switch	255	255	Parameter 2	Parameter 3
5		Invalid switch	255	255	Parameter 2	Parameter 3

- Parameter 3 “ On”

Modify button function configuration

Function no.	Subnet ID	Device ID	Type	Parameter 1	Parameter 2	Parameter 3
1	1	251	Universal switch	1(Switch no.)	On(Switch Status)	N/A

Now once you press on DDP first button the RS232 Command is will execute .

In RS485 tabs it's the same exactly like RS232 steps.

## 10-Logic Module:

### 10-1 Logic Overview:

Central Time Clock and Main Automation Controller. It is the smart system servant that assist and monitor temperature, events, energy consumption, patterns, with main Targets: maintain, safeguard, protect and economize. It Can Trigger prayer announcements, reminders, alerts, macros, and moods. Each Logic module Consist of 240 tables, Each Table of 4 programmable Logic Lines totaling up to 960 Line of Logics using simplified (and, Or Nand, Nor, with 255 Flags). Logical condition consist of trigger combinations like: time, scene Light channel status, curtain status, room temperature, security mode, day night, time... and so on

### 10-2 Logic time and location sitting :

In the time and location tab you can easily change the time and the date of the system Also you can select you exact location from **Location** button which is good to calculate Sunrise and sunset time accordingly to your location :

The screenshot shows the 'Time and Location' configuration tab for a logic module. It is divided into three main sections:

- Select device:** A dropdown menu showing '1-203-SB-Logic2-DN'.
- Date Time of Logic Module:** A date picker set to 'Saturday, April 21, 2012' and a time picker set to '12:20:04 (hh:mm:ss)'. There is a checkbox for 'Modify time synchronously with destine logic device' and buttons for 'PC Time', 'Refresh', and 'Save'.
- Geographic Location:** Fields for Latitude (+25 Degree 15 Minute), Longitude (+55 Degree 17 Minute), and Time zone (GMT +04 : 00). A 'Location' button is present. Below these fields, a box displays 'Sunrise Time 5:51' and 'Sunset Time 18:44'. A 'Save' button is at the bottom right.

For Muslim Prayer times you can check “**method for prayer Times**” then you will get multi options you choose according to your Location “juristic” “Doctrine”. After you click save you will get prayer times (Fajer, Dhiher, ASR, Magreb, and Ishaa) :

Geographic Location

Latitude: + 25 Degree: 15 Minute

Longitude: + 55 Degree: 17 Minute

Time zone: (GMT) +04 : 00 )  Method For P

Fajr: 4:28  
 Sunrise: 5:51  
 Dhuhr: 12:18  
 Asr: 15:48  
 Maghrib: 18:44  
 Isha: 20:14

Dhuhr, Maghrib Prayer Time

Dhuhr: 1 Maghrib: 1

Day Light Savings

Shift - Hour before (M/D): 4 1

Shift - Hour after (M/D): 6 1

Juristic Methods (For Asr prayer)

Standard (Imams Shafi, Hanbali, and Maliki)  Hanafi

Method for Prayer Times

Muslim World League  
 Egyptian General Authority of Survey  
 University of Islamic Sciences, Karachi  
 Jmir Al-Dua  
 North America  
 Twilight Angle in degrees Fajr: Isha:

Now for logic tab you have 20 pages , you can put your command here on the black screen

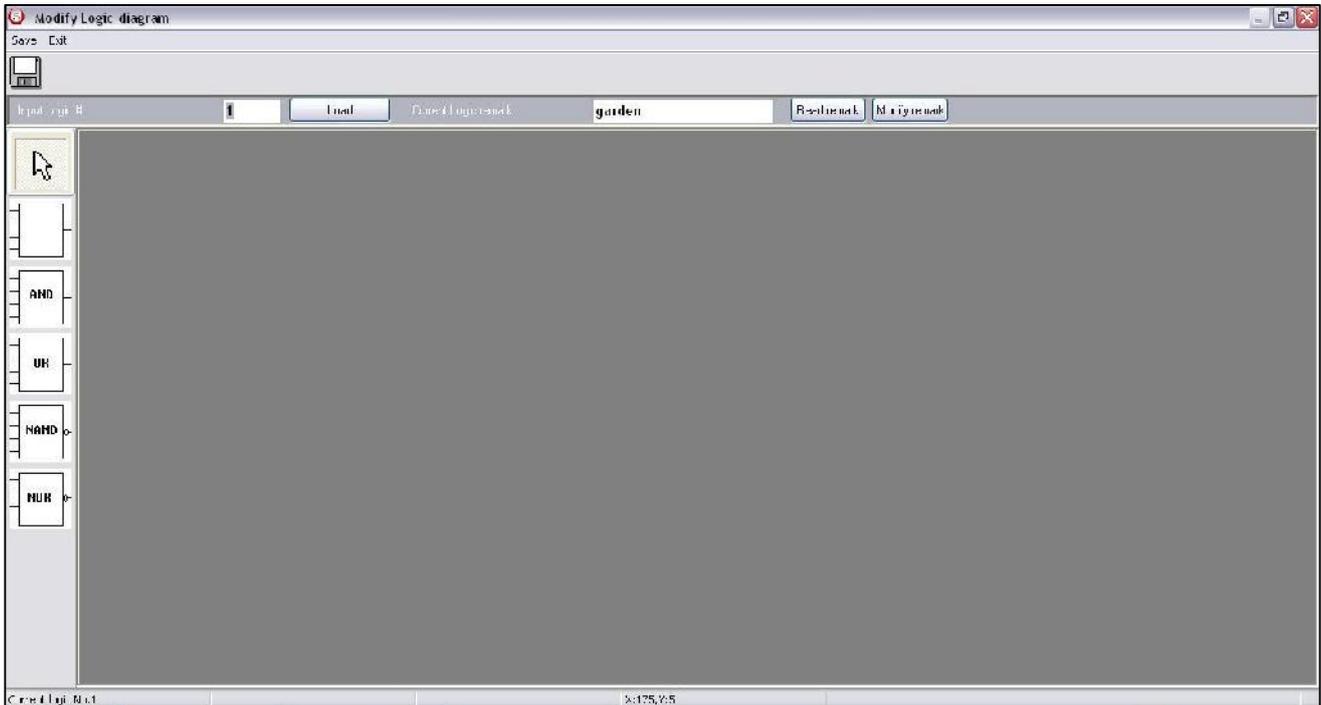

Serial Logic Time on 11/1/2011

Select device: Device: 1-203-SB-logic2-DN  Equipment is available

Select Logic: Logic ID: 1:30:00

[Large black area for logic commands]

Double click on the blank screen to enter “Modify mode” :

The concept of the logic like the following:

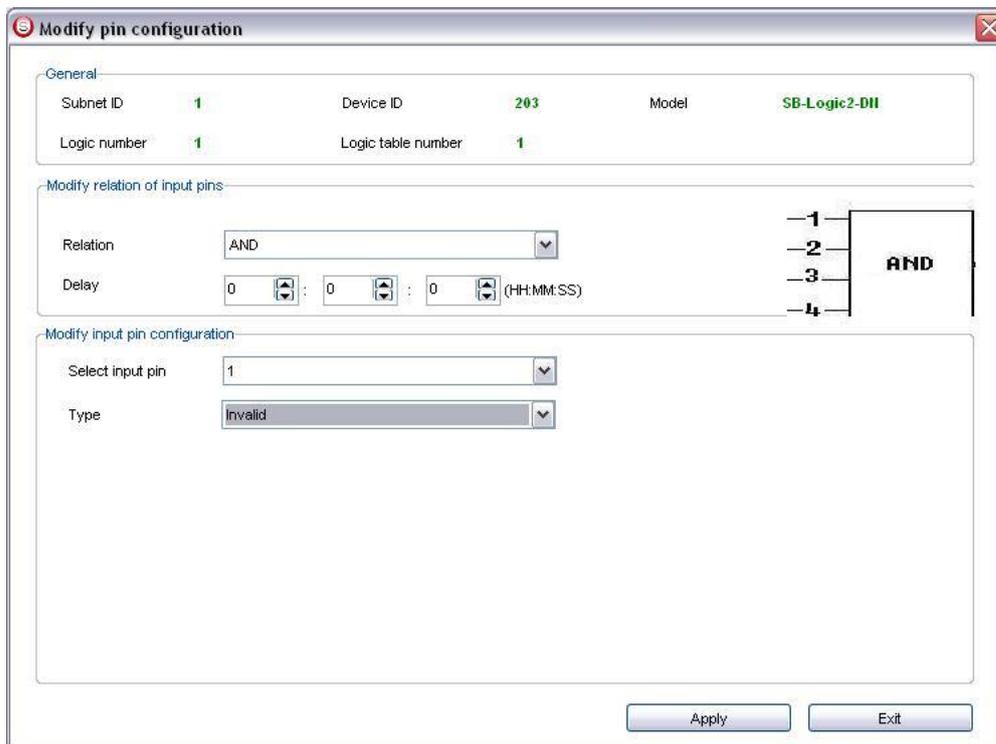

- Put your conditions as blocks
- If the statuses of these conditions are true then your commands accordingly to your conditions will execute.
- You have on the right side 4 logic blocks you can use them as you want :  
(And ,Or, Nand , Nor )

### 10-3 pin setup :

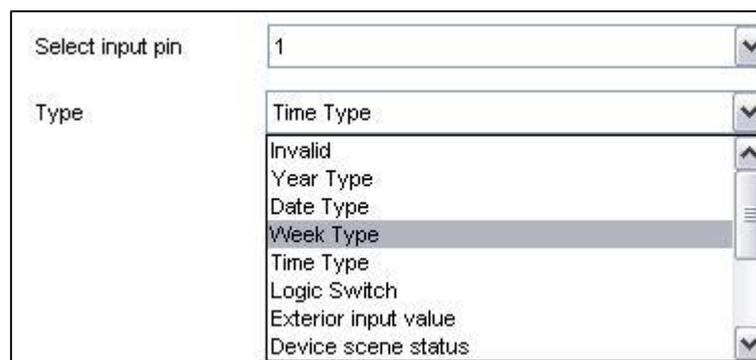

Pin setup indicating to conditions, to put condition:

- Double click on black screen
- Choose the appropriate block (AND, OR, NAND, NOR)
- Right click on the block and select “pin setup”

You will get new window :

- In Relation combo box : you can change the type of the block ,  
Ex: even if you select and or any one you can change it .
- Delay : execute the command(s) if the condition (s) true after the desire time .
- Select input pin: in each block you have 4 conditions so you can change between them by this option.
- Type : you condition(s) type :

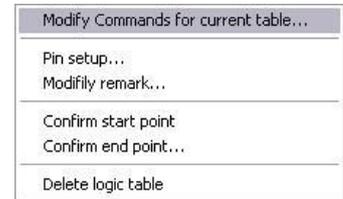

- You have multi option, you can select specific year, date, week and time .
- Ability to check the status of external module (On or Off).
- Ability to check the status of AC (on,off, temp ++).
- Ability to check the status of security (arm,alarm,disarm).
- Ability to check the status logic switches (Flags).

## 10-4 Modify output :

In modify output you can put your command(s) that you want to execute if the condition(s) is(are) true .

To modify :

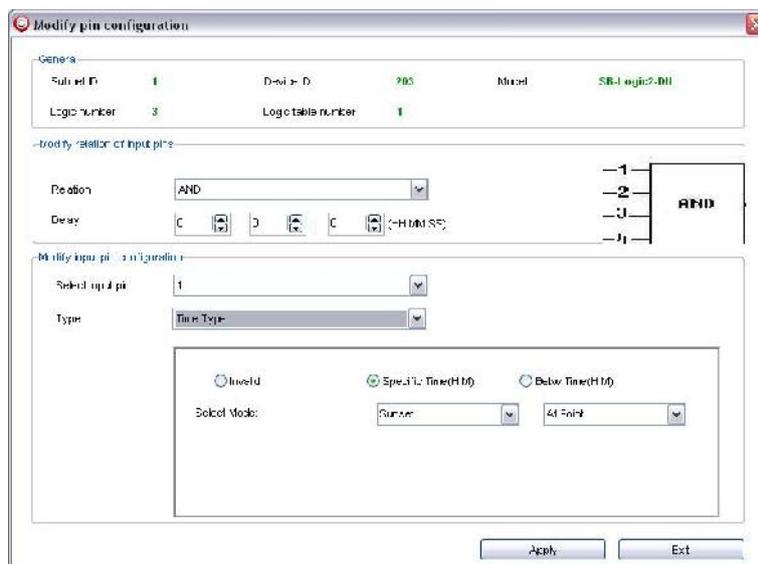

- Right click on the block
- Select “Modify commands for current table”.
- You can put normal S-bus command like before

Moidy commands for current table						
	Subnet ID	Device ID	Type	Parameter 1	Parameter 2	Parameter 3
1	1	51	Single channel lighting (1(Channel no.)	100(Intensity %)	0:0(Running time(mm:	

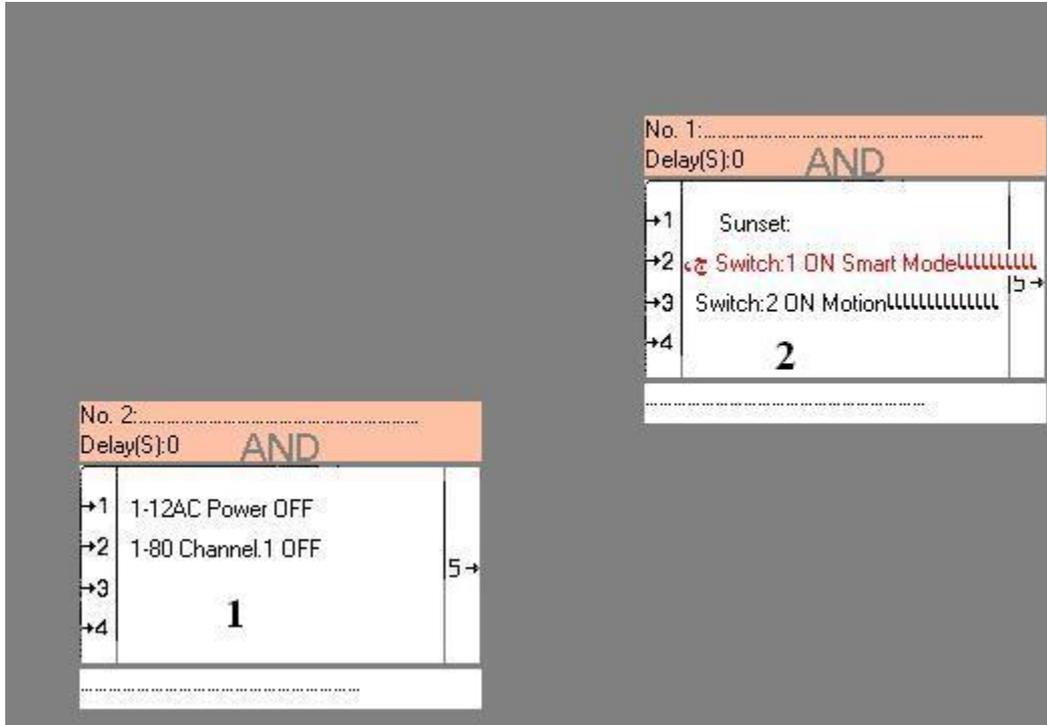

Ex: How can I make outside garden lights on at the **sunset** and turn it off at the 12 am ?

- First put one block (table) doesn't matter “And” or “OR”
- In pin setup select type “time type” and choose “sunset”
- In modify mode put you lights address to turn it on (100%)
- Make another block(table) and put the pin setup on “time type”
- Chose “sunrise”
- In modify mode put the same lights address to turn it off (0 %)

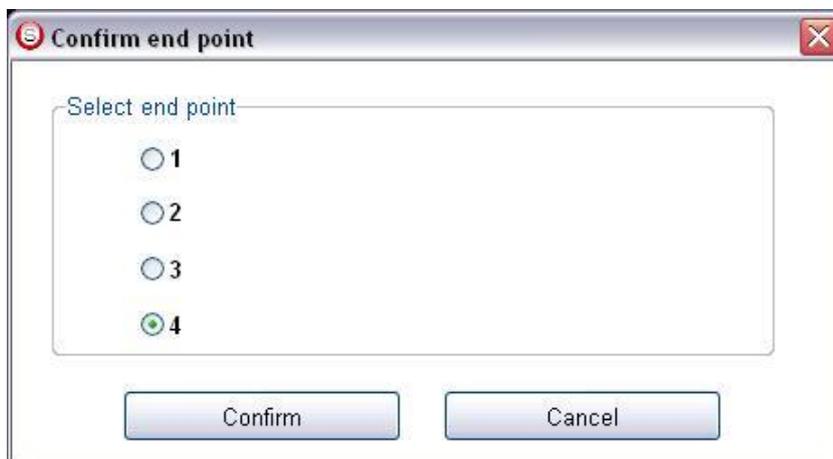

### 10-5 Linked table :

if you have more than 4 conditions and you want to check the status of all of them at the same time !! There is link table feature for that:

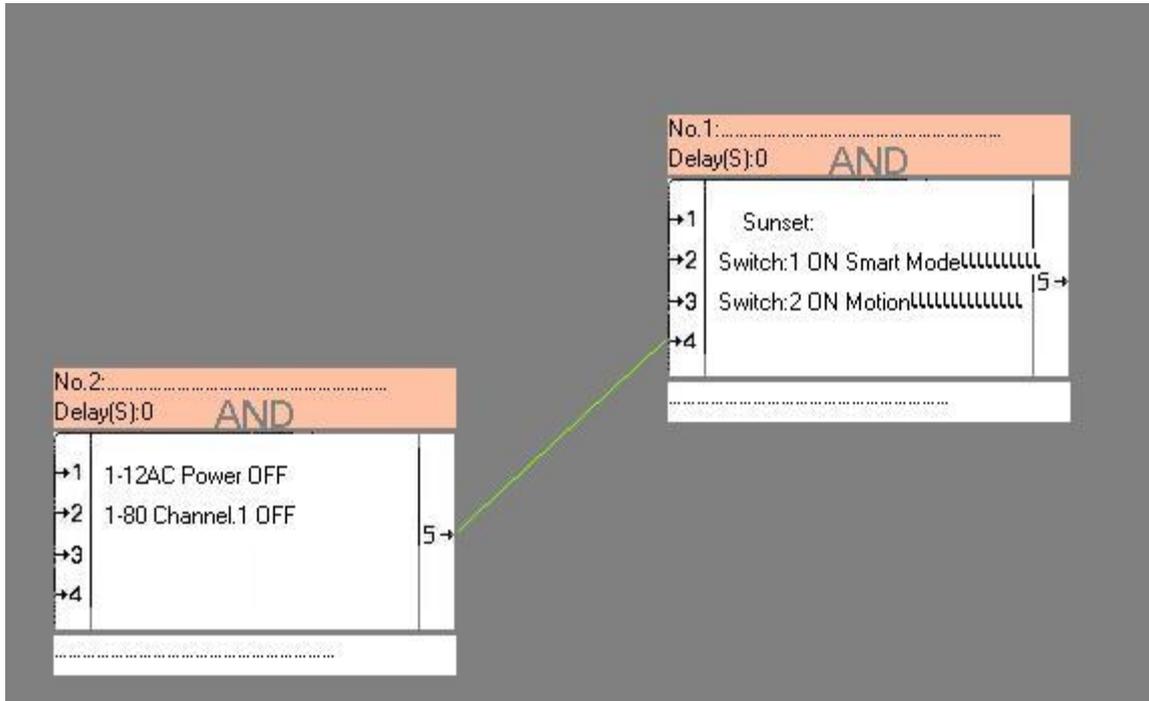

To merge these two conditions to other table:

- Right click on table No.1 and choose “Confirm start point”
  - On table No.2 Right click and choose “Confirm end point “
- You will get new popup window , and because we have condition No 4 of table 2 is empty so we will choose No.4 in this popup window like following :

- To make sure your work is correct you will notice new green line

- To remove this link :
  - Right click on table 2 and choose "confirm end point"
  - Check on "Rmove " and press Confirm :
